PREFACE

The need for accurate health statistics and population estimates for the Status Indian population is acute. Consistent and reliable data are essential to monitor health status, to assess health needs, and to plan, fund, and deliver health care programs to the province's aboriginal people. Since 1989 the British Columbia Vital Statistics Agency has partnered with the First Nations and Inuit Health Branch of Health Canada to provide population estimates and health statistics for the Status Indians in British Columbia since 1989. A special feature report *Analysis of Status Indians in British Columbia: a Vital Statistical Overview* was released in 1994. This was followed by a series of reports providing health statistics for Status Indians.

Although the provincial level analyses provided valuable information on British Columbia's Status Indians, these reports could not answer the demand for regional data. *Regional Analysis of Health Statistics for Status Indians in British Columbia, 1991-1999: Birth Related and Mortality Summaries for British Columbia and 20 Health Regions* addressed this need.

The Vital Statistics Agency and the First Nations and Inuit Health Branch are pleased to present *Regional Analysis of Health Statistics for Status Indians in British Columbia, 1991-2001, Birth Related and*

Mortality Summaries for British Columbia and 16 Health Service Delivery Areas. The regional analyses in this report are provided by Health Service Delivery Areas (HSDA), the *New Era* data dissemination areas used by the Ministry of Health Planning and the Ministry of Health Services. In addition to providing data for 2000 and 2001, previously published population estimates and summary statistics have been updated. This is also the first Status Indian report using the tenth revision of the World Health Organization's International Classification of Diseases (ICD-10) for medical coding of causes of death and stillbirth

Like the Agency's other Status Indian reports, a unique methodology is used to identify Status Indian births and deaths, and to produce provincial and sub provincial Status Indian population estimates. In addition to the Agency's birth and death data, the Indian Status Verification File of the First Nations and Inuit Health Branch, Health Canada was used to identify Status Indians resident in British Columbia. It should be emphasized the Verification File includes Status Indians born and registered in other provinces. A third source used to identify Status Indians in the province was the Status Indian Entitlement files from the B.C. Medical Services Plan. Numerous tables, figures, and maps present population estimates, life expectancy, and summaries of birth-related and mortality measures for

Status Indians compared to other provincial or area residents.

Vital Statistics would like to acknowledge the assistance of many groups and individuals responsible for ensuring recording of vital events and contributing to the continual improvement in the quality of the data and the quality of publications based on the data.

EXECUTIVE SUMMARY

This report presents summaries of birth-related and mortality measures to be used as health status indicators for British Columbia's Status Indian population. Data from 1991 to 2001 were analyzed and comparisons were made between Status Indian and other residents. This summary provides provincial level information while subsequent sections of this report provide information at the health service delivery area level. All rates and counts referred to in the analysis are from supporting tables or appendices presented in the report.

HIGHLIGHTS OF STATUS INDIAN POPULATION ESTIMATES

- In 2001, one in 26 B.C. residents was a Status Indian (3.8 % of the provincial population).
- The Status Indian population is younger than other residents.
- Children (age 19 or younger) made up almost two fifths of the Status Indian population, but less than one-quarter of other residents.
- Less than one in 20 Status Indians was a senior (65 years of age or older), compared to more than one in eight for other residents.

HIGHLIGHTS OF LIFE EXPECTANCY

- Status Indians in B.C. had a life expectancy of 72.7 years, compared to 80.0 years for other residents. The difference in life expectancy between Status Indian and other males (69.9 for Status Indian males and 77.9 for other male residents) was 8.0 years. Life expectancy for Status Indian and other females was 75.4 and 82.0 years respectively.

HIGHLIGHTS OF BIRTH-RELATED STATISTICS

- Over the period 1991 to 2001, one out of every 14 babies born in the province was a Status Indian. There were 34,731 Status Indian live births, or 23.6 per 1,000 Status Indian population, more than twice the rate for other residents.
- The Status Indian population accounted for less than one out of every 12 low birth weight births in the province over the 11 year period.
- One out of 10 premature live births in B.C. in 1991-2001 was a Status Indian baby.
- The Status Indian cesarean section rate was 20% lower than the rate for other residents for 1991-2001.

- From 1991 to 2001, more than one in four teenage mothers in the province was a Status Indian. The Status Indian live birth rate for teenage mothers was four and a half times the rate for other residents.
- The Status Indian population accounted for less than one in 28 live births to women 35 or older in 1991-2001.

HIGHLIGHTS OF INFANT MORTALITY STATISTICS

- From 1991-2001, one out of every eight infant deaths in the province was a Status Indian baby. There were 322 Status Indian infant deaths. The Status Indian infant mortality rate was almost double the rate for other residents.
- There has been a significant decrease in infant mortality in the Status Indian population. Status Indian infant mortality rate showed a dramatic decline from 14.7 infant deaths per 1,000 live births in 1995 to 4.0 in 1999 and 2000, and 4.3 in 2001. Infant mortality also declined in this time period for other residents, dropping from 5.2 to less than 4.0.
- More than three out of five Status Indian infant deaths occurred in the post neonatal period compared to three out of ten for other residents. The Status Indian post neonatal death rate was more than four times the rate for other residents.

- Sudden Infant Death Syndrome (SIDS) was the leading cause of infant mortality in the Status Indian population, accounting for more than a third of all infant deaths. Between 1991 and 2001, the infant mortality rate for SIDS in the Status Indian population was almost six times the rate for other residents. The rate of SIDS in the Status Indian population has dropped over the 11 year period.

HIGHLIGHTS OF MORTALITY STATISTICS

- Over the period 1991 to 2001, one out of every 36 deaths in the province was a Status Indian, for a total of 8,072 Status Indian deaths. The Status Indian ASMR was more than one and a half times the rate for other residents.
- The Status Indian population had higher mortality in the younger age groups. In the 11 year period, roughly one out of 12 Status Indian deaths was a child, compared to one out of 60 for other residents.
- There were only 11 maternal deaths to all B.C. residents during the 11 year period from 1991 to 2001; two of these were Status Indian women.
- The causes of death responsible for the largest number of Status Indian deaths in 1991-2001 were ischemic heart disease (841 deaths), motor vehicle accidents (520) accidental poisoning (478), suicide (421), and cerebrovascular disease (413).
- In the provincial Status Indian population, the leading causes death based on Age Standardized Mortality Rates were ischemic heart disease, cerebrovascular disease, gastrointestinal cancers, pneumonia/influenza, and cancer of the respiratory system. These were also the top five causes of death for other residents in a slightly different order, with cancer of the respiratory system ranked higher than gastrointestinal cancers and pneumonia/influenza. Together, these five categories accounted for more than one quarter of Status Indian deaths and almost half of the deaths to other residents between 1991 and 2001.
- There were 1,883 Status Indian deaths from circulatory system diseases in the 1991-2001 period. This cause of death was responsible for almost a quarter of Status Indian deaths and over one third of deaths of other residents. The Status Indian ASMR for deaths from circulatory system diseases was almost 40% higher than the rate for other residents.
- Chronic liver disease/cirrhosis was ranked eighth in the list of age standardized causes of death in the Status Indian population, compared to twenty-third for other residents.
- Accidents and violence accounted for 2,126 Status Indian deaths or a quarter of the Status Indian deaths in the 11 years. Among other residents, less than one in ten was from external causes. The Status Indian ASMR was three and a half times the rate for other residents.
- The average Potential Years of Life Lost for deaths from accidents and violence was 40.2 years for Status Indians compared to 34.8 years for other residents.
- Motor vehicle accidents were responsible for the largest number of Status Indian deaths from external causes (520 deaths) in 1991-2001. The Status Indian ASMR was three and a half times the rate for other residents.
- Accidental poisoning was responsible for 478 Status Indian deaths in 1991-2001 and had the second highest ASMR among the external cause of death sub-categories (after motor vehicle accidents). The Status Indian ASMR for accidental poisoning deaths was more than four times the rate for other residents.

- There were 421 Status Indian suicides in the 11 year period. The Status Indian ASMR for suicide was more than two and a half times the rate for other residents.
- Between 1991 and 2001, there were 151 Status Indian homicides. The Status Indian ASMR for homicides was five and a half times the rate for other residents.
- Out of 364 deaths from fire and flames in the province between 1991 and 2001, 76 occurred in the Status Indian population. The Status Indian ASMR was seven times the rate for other residents.
- The 1991 - 2001 Status Indian ASMR for alcohol-related deaths was more than six times the rate for other residents.
- The Status Indian ASMR for drug-induced deaths was more than three times the rate for other residents.

INTRODUCTION

This report was produced by the British Columbia Vital Statistics Agency and the First Nations and Inuit Health Branch of Health Canada as part of an on-going joint project. It replaces the report *Regional Analysis of Health Statistics for Status Indians in British Columbia, 1991-1999, Birth Related and Mortality Summaries for British Columbia and 20 Health Regions*. This publication includes data for 2000 and 2001, and updates previously published population estimates and summary statistics for the earlier years. Regional analyses are presented by Health Service Delivery Areas (HSDA), the *New Era* data dissemination areas used by the Ministry of Health Planning and the Ministry of Health Services. This is also the first Status Indian report using the tenth revision of the World Health Organization's International Classification of Diseases (ICD-10).

Medical coding of causes of death and stillbirth according to ICD-10 was implemented at the beginning of the year 2000. ICD-10 is far more detailed than ICD-9, with approximately twice as many categories. Many changes in the codes and

in the rules for selection of the underlying cause of death preclude direct comparison of data in ICD-10 with data coded in ICD-9. Extensive manual reviews using translation tables in conjunction with recoding of mortality data from ICD-9 to ICD-10 allowed the production of trend data. This approach, unique to publications of the B.C. Vital Statistics Agency, allowed many of the cause of death categories used in this report to match those in previous reports.

The need for population estimates and health statistics for the Status Indian population is acute. Consistent and reliable data are essential to monitor health status, to assess health needs, and to plan, fund, and deliver health care programs to the province's aboriginal people. This report presents indicators for one section of that broad population, provincial residents who are registered as *Status Indian*. A unique methodology was used to produce provincial and regional Status Indian population estimates and to identify Status Indian births and deaths in British Columbia. Analyses based on these birth related and mortality summaries provide the new Health Authorities with baseline information for the Status Indian populations in their areas.

DEFINITION OF STATUS INDIAN

Status Indians are one part of the broad group of First Nations people in British Columbia. There is considerable interest in the health status of First Nations people whether Status, Non-Status or Metis, but in most cases, relevant data exist only for Status Indians. In order to analyze the characteristics of any group or population, there needs to be a way to clearly define group membership and identify the events (births, deaths, hospitalizations, etc.) that occur in that group. Information to identify Status Indian births and deaths was obtained from the British Columbia Vital Statistics Agency, the B.C. Medical Services Plan, and the First Nations and Inuit Health Branch of Health Canada. Status Indians were the only First Nations group that could be identified.

This report presents summaries of birth related and mortality measures as health status indicators for the Status Indian population who were resident in the province, with comparisons to other residents. The major source of data was the British Columbia Vital Statistics Agency's statistical database (VS) of information extracted from the registration of births and deaths; it included demographic information, medical information related to the birth or cause of death, and whether the individual was a Status Indian. Another

database used to identify Status Indians in the Province was the Indian Status Verification File (SVF) of the First Nations and Inuit Health Branch, Health Canada, originating from the Department of Indian Affairs and Northern Development. It should be emphasized that this database of Status Indians resident in British Columbia includes Status Indians born and registered in other provinces. A third database that was used to identify Status Indians in the Province was the Status Indian Entitlement files from the B.C. Medical Services Plan

(MSP). Using an extensive computer matching process, a birth or death in the VS database was considered to be a Status Indian event if the individual was identified as a Status Indian in any of the three sources.

Using a combination of VS, MSP and SVF files, 34,731 live births were identified as Status Indian events in the 11 year period 1991-2001 (see Table 1). Slightly more than half (50.6%) of the live births were identified by all three sources. Approximately one quarter were identified by two sources (25.5%) or by only one of the three sources (23.9%).

Total	714	784	782	694	674	697	811	788	711	689	728	8,072	100.0

Notes: VS indicates that the event was identified by the BC Vital Statistics Agency.
MSP indicates that the event was identified by the BC Medical Services Plan.
SVF indicates that the event was identified by the Indian Status Verification File, updated to April 2002.

A total of 8,072 deaths were identified by VS, MSP, SVF, or a combination of these sources for the years 1991 through 2001 (see Table 2). Approximately one third of the deaths were identified by all three sources (33.6%), with a similar percentage identified by two sources (34.0%) or by only one source (32.4%).

Since this report's definition of Status Indian is determined by a compilation of these three data sources, the data presented in this report may not match data reported by other sources. It is also important to note that this definition is not equivalent to the broader terms such as Aboriginal or First Nations people.

STATUS INDIAN POPULATION ESTIMATES

The population estimates presented in this report were created by the British Columbia Vital Statistics Agency specifically for this project, based on age and usual residence information on Vital Statistics birth and death files and Status Indian Entitlement files from the B.C. Medical Services Plan (MSP). These files contain the age and usual residence of Status Indians who have registered to have their MSP premiums funded by the federal government. The MSP files were adjusted for births and deaths by cross matching with historical annual files from the British Columbia Vital Statistics Agency.

Population estimation is a complex undertaking. Using the MSP administrative files as the basis for deriving population estimates has both strengths and weaknesses. On one hand, the addresses in the MSP files enable the project to produce regional population estimates that are not available elsewhere. On the other hand, since registration is voluntary, the files might not include Status Indians who are covered by a spouse's or employer's MSP coverage. Overall, the MSP database was considered to be the best available source for estimating the Status Indian population living in B.C. However, there were concerns that the population estimates published in earlier reports of this series undercounted

children aged 1-4 when compared to the number of births in the preceding four years. Additional year-to-year comparisons of records in the MSP files were added to ensure that births from one year were excluded from the next year's population estimates only when death records were found. These additional comparisons should result in improved longitudinal population estimates. Readers are reminded that the population estimates presented in this report are intended for research purposes only.

Table 3 provides 2001 provincial population estimates by age group and gender for Status

Indians and other residents, while Appendix 1 provides similar information for each year from 1991 to 2001 for the Status Indian populations in each Health Service Delivery Area (HSDA), and 1991 to 2000 population estimates at the provincial level. A map showing HSDA and Health Authorities is provided as an aid to readers who are not familiar with identification of these areas by their numbers. Geographic areas are assigned based on the usual residence postal code of the mother (for live births and stillbirths) or the decedent (for deaths). If the usual residence postal code is missing or invalid, the usual residence city is used.

TABLE 3

HSDAs 11 East Kootenay and 12 Kootenay Boundary were combined to avoid small numbers that would result in unreliable rates. It should be noted that the Health Service Delivery Areas do not sum to the provincial Status Indian population due to records with unknown addresses (included in provincial counts).

The major highlights of the population estimates are summarized below:

- In 2001, one in 26 B.C. residents was a Status Indian. The population of Status Indians in the province was estimated at 156,443 (or 3.8 % of the provincial population).
- In 2001, there were 60,473 Status Indian children (age 19 years or younger) in the province. Almost two fifths (38.7%) of the Status Indian population and one quarter (23.8%) of other residents were in this young age group. Although overall Status Indians made up 3.8 % of the provincial population, they comprised 6.1% of the B.C. population under age 20.
- In 2001, one in five Status Indians was over 44 years of age (20.6%) but less than one in 20 was aged 65 or older 20 (4.6%). For other residents, the proportions were almost two in five (37.8%) over 44 years of age and more than one in eight (13.2%) aged 65 or older.

A graphical comparison of these age distributions can be seen in the population pyramids that show the percentage of the population in each five-year age group, with males shown on the left and females on the right. For Status Indians, the population

pyramid is roughly triangular in shape, with a wide base indicating high birth rates and population growth. The pyramid for other residents is characterized by the baby boomer bulge in the middle age groups, and a narrowing base resulting from declining birth rates in the last 35 years.

LIFE EXPECTANCY

Appendix 2 provides 1997-2001 life expectancy at birth for Status Indians and other residents. This information is provided for males, females, and both genders combined at the provincial and Health Service Delivery Area levels.

- Status Indians in B.C. had a life expectancy of 72.7 years, compared to 80.0 years for other residents. The difference in life expectancy between Status Indian and other males (69.9 for Status Indian males and 77.9 for other male residents) was 8.0 years. Life expectancy for Status Indian and other females was 75.4 and 82.0 years respectively.
- 22 Simon Fraser was the HSDA with the lowest life expectancy for Status Indians (65.6 years). This was 14.3 years less than the life expectancy for others in the same area (79.9 years) and was the greatest relative difference between the two populations of all of the areas in the province.

FIGURE 5
LIFE EXPECTANCY BY HEALTH SERVICE DELIVERY AREA
STATUS INDIAN AND OTHER RESIDENTS
BRITISH COLUMBIA, 1997 - 2001

- Status Indians in the HSDA 51 Northwest had the highest life expectancy of all Status Indians in the province (76.1 years). The other residents in this area had a life expectancy of 78.4 years.
- The life expectancy for Status Indians was lower than the life expectancy for other residents in all areas. The difference ranged from 2.3 years in HSDA 51 Northwest to 14.2 in HSDA 22 Simon Fraser.

HIGHLIGHTS OF HEALTH SERVICE DELIVERY AREA STATISTICS

11/12 EAST KOOTENAY/KOOTENAY BOUNDARY

Health Service Delivery Areas 11 East Kootenay and 12 Kootenay Boundary were combined to avoid small numbers that would result in unreliable rates.

- The 2,604 Status Indian residents in this area in 2001 represented 1.6% of the population in the HSDA.
- From 1991 to 2002, there were 651 Status Indian live births in HSDA 11/12 East Kootenay/Kootenay Boundary. The Status Indian live birth rate was 29.0 per 1,000 Status Indian population, more than three times the rate for other residents in the area (9.4).
- Over the 11 years, the Status Indian population in the East Kootenay/Kootenay Boundary HSDA had 148 deaths with an ASMR of 158.3 per 10,000 standard population, two and a half times the rate of 62.6 for other residents.

13 OKANAGAN

- The 8,410 Status Indian residents in this area in 2001 represented 2.7% of the population in the HSDA.
- From 1991 to 2001, there were 1,825 Status Indian live births in HSDA 13 Okanagan. The Status Indian live birth

rate was 24.2 per 1,000 Status Indian population, two and a half times the rate for other residents in the area (9.6).

- Over the 11 years, the Status Indian population in the Okanagan HSDA had 410 deaths with an ASMR of 94.8 per 10,000 standard population, one and two thirds the rate of 56.7 for other residents.

14 THOMPSON CARIBOO SHUSWAP

- The 20,447 Status Indian residents in this area in 2001 represented 9.0% of the population in the HSDA.
- From 1991 to 2001, there were 3,849 Status Indian live births in HSDA 14 Thompson Cariboo Shuswap. The Status Indian live birth rate was 19.5 per 1,000 Status Indian population, twice the rate for other residents in the area (9.9).
- Over the 11 years, the Status Indian population in the Thompson Cariboo Shuswap HSDA had 1,036 deaths with an ASMR of 85.8 per 10,000 standard population, one and a third times the rate of 65.3 for other residents.

21 FRASER VALLEY

- The 10,297 Status Indian residents in this area in 2001 represented 4.2% of the population in the HSDA.

- There were 2,325 Status Indian live births in HSDA 21 Fraser Valley over the 11 years. The Status Indian live birth rate was 24.8 per 1,000 Status Indian population, almost twice the rate for other residents in the area (13.4).
- Over the 11 years, the Status Indian population in the Fraser Valley HSDA had 474 deaths with an ASMR of 94.3 per 10,000 standard population, one and a half times the rate of 62.0 for other residents.

22 SIMON FRASER

- The 5,733 Status Indian residents in this area in 2001 represented 1.1% of the population in the HSDA.
- From 1991 to 2001, there were 1,835 Status Indian live births in HSDA 22 Simon Fraser. The Status Indian live birth rate was 38.1 per 1,000 Status Indian population, more than three times the rate for other residents in the area (12.1).
- Over the 11 years, the Status Indian population in the Simon Fraser HSDA had 370 deaths with an ASMR of 340.4 per 10,000 standard population, almost five and a half times the rate of 63.6 for other residents.

23 SOUTH FRASER

- The 6,037 Status Indian residents in this area in 2001 represented 1.0% of the population in the HSDA.
- From 1991 to 2001, there were 2,011 Status Indian live births in HSDA 23 South Fraser. The Status Indian live birth rate was 43.3 per 1,000 Status Indian population, more than three times the rate for other residents in the area (13.6).
- Over the 11 years, the Status Indian population in the South Fraser HSDA had 288 deaths with an ASMR of 200.4 per 10,000 standard population, three and a half times the rate of 56.5 for other residents.

31 RICHMOND

- The 784 Status Indian residents in this area in 2001 represented 0.5% of the population in the HSDA.
- From 1991 to 2001, there were 252 Status Indian live births in HSDA 31 Richmond. The Status Indian live birth rate was 34.9 per 1,000 Status Indian population, more than three times the rate for other residents in the area (10.8).

- Over the 11 years, the Status Indian population in the Richmond HSDA had 45 deaths with an ASMR of 254.7 per 10,000 standard population, almost five times the rate of 51.5 for other residents.

32 VANCOUVER

- The 13,756 Status Indian residents in this area in 2001 represented 2.4% of the population in the HSDA.
- From 1991 to 2001, there were 2,843 Status Indian live births in HSDA 32 Vancouver. The Status Indian live birth rate was 21.1 per 1,000 Status Indian population, twice the rate for other residents in the area (10.7).
- Over the 11 years, the Status Indian population in the Vancouver HSDA had 1,095 deaths with an ASMR of 152.7 per 10,000 standard population, almost two and a half times the rate of 64.6 for other residents.

33 NORTH SHORE/COAST GARIBALDI

- The 11,427 Status Indian residents in this area in 2001 represented 4.3% of the population in the HSDA.

- From 1991 to 2001, there were 2,162 Status Indian live births in HSDA 33 North Shore/Coast Garibaldi. The Status Indian live birth rate was 19.1 per 1,000 Status Indian population, almost twice the rate for other residents in the area (10.3).

- Over the 11 years, the Status Indian population in the North Shore/Coast Garibaldi HSDA had 622 deaths with an ASMR of 97.2 per 10,000 standard population, one and two thirds the rate of 57.5 for other residents.

41 SOUTH VANCOUVER ISLAND

- The 12,893 Status Indian residents in this area in 2001 represented 3.2% of the population in the HSDA.
- From 1991 to 2001, there were 3,006 Status Indian live births in HSDA 41 South Vancouver Island. The Status Indian live birth rate was 25.1 per 1,000 Status Indian population, more than two and a half times the rate for other residents in the area (9.3).
- Over the 11 years, the Status Indian population in the South Vancouver Island HSDA had 630 deaths with an ASMR of 117.5 per 10,000 standard population, twice the rate of 59.6 for other residents.

42 CENTRAL VANCOUVER ISLAND

- The 12,597 Status Indian residents in this area in 2001 represented 5.1% of the population in the HSDA.
- From 1991 to 2001, there were 2,942 Status Indian live births in HSDA 42 Central Vancouver Island. The Status Indian live birth rate was 24.7 per 1,000 Status Indian population, more than two and a half times the rate for other residents in the area (9.4).
- Over the 11 years, the Status Indian population in the Central Vancouver Island HSDA had 612 deaths with an ASMR of 99.2 per 10,000 standard population, more than one and a half times the rate of 61.8 for other residents.

43 NORTH VANCOUVER ISLAND

- The 7,025 Status Indian residents in this area in 2001 represented 11.5% of the population in the HSDA.
- From 1991 to 2001, there were 1,475 Status Indian live births in HSDA 43 North Vancouver Island. The Status Indian live birth rate was 21.8 per 1,000 Status Indian population, twice the rate for other residents in the area (10.9).

- Over the 11 years, the Status Indian population in the North Vancouver Island HSDA had 357 deaths with an ASMR of 102.1 per 10,000 standard population, more than one and a half times the rate of 65.3 for other residents.

51 NORTHWEST

- The 25,190 Status Indian residents in this area in 2001 represented 27.3% of the population in the HSDA.
- From 1991 to 2001, there were 4,895 Status Indian live births in HSDA 51 Northwest. The Status Indian live birth rate was 19.5 per 1,000 Status Indian population, one and a half times the rate for other residents in the area (12.9).
- Over the 11 years, the Status Indian population in the Northwest HSDA had 1,115 deaths with an ASMR of 75.3 per 10,000 standard population, slightly higher than the rate of 70.9 for other residents.

52 NORTHERN INTERIOR

- The 14,044 Status Indian residents in this area in 2001 represented 8.7% of the population in the HSDA.

- From 1991 to 2001, there were 3,248 Status Indian live births in HSDA 52 Northern Interior. The Status Indian live birth rate was 24.8 per 1,000 Status Indian population, more than twice the rate for other residents in the area (12.1).

- Over the 11 years, the Status Indian population in the Northern Interior HSDA had 650 deaths with an ASMR of 91.9 per 10,000 standard population, one and a third times the rate of 70.1 for other residents.

53 NORTHEAST

- The 5,177 Status Indian residents in this area in 2001 represented 7.8% of the population in the HSDA.
- From 1991 to 2001, there were 1,339 Status Indian live births in HSDA 53 Northeast. The Status Indian live birth rate was 29.1 per 1,000 Status Indian population, twice the rate for other residents in the area (14.3).
- Over the 11 years, the Status Indian population in the Northeast HSDA had 188 deaths with an ASMR of 85.8 per 10,000 standard population, one and a third times the rate of 67.9 for other residents.

OVERVIEW OF BIRTH STATISTICS

This section examines the birth-related statistics for Status Indians and other B.C. residents at the provincial and Health Service Delivery Area (HSDA) levels. Live births and stillbirths are assigned to geographic areas based on the usual residence postal code of the mother at the time she gave birth. If the usual residence postal code is missing or invalid, the usual residence city is used. Birth-related statistics are provided in Appendix 3 and include live births by gender, low birth weight, premature, cesarean section, teenage mothers, elderly gravida, and stillbirths. Causes of stillbirth are shown in Table 4 in the infant mortality section.

LIVE BIRTHS

- Over the period 1991 to 2001, one out of every 14 babies born in the province was a Status Indian. There were 34,731 Status Indian live births: 17,872 males and 16,858 females (and one birth with unknown gender). The Status Indian live birth rate for 1991-2001 was 23.6 per 1,000 Status Indian population, more than twice the rate of 11.2 per 1,000 for other residents.

FIGURE 6
LIVE BIRTH RATE
STATUS INDIAN AND OTHER RESIDENTS
BRITISH COLUMBIA, 1991-2001

Note: Status Indian rate with 95% confidence interval.

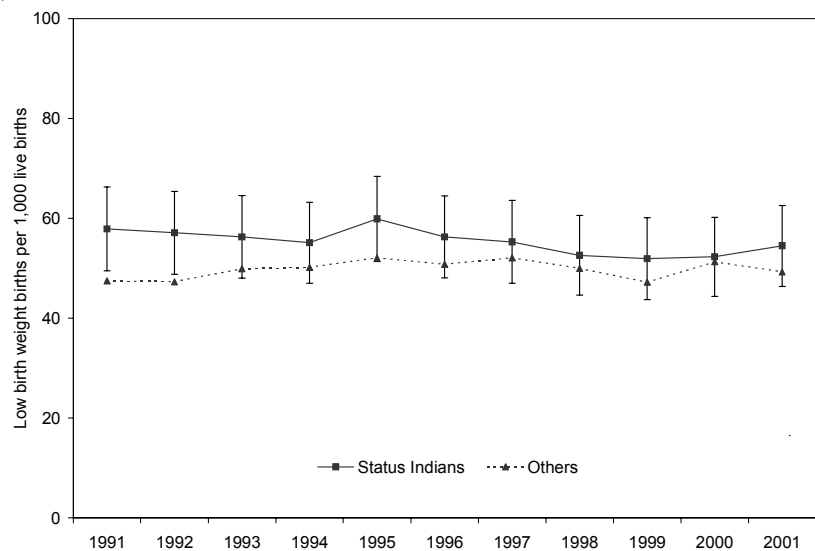

- The live birth rate for Status Indians decreased each year from 1991 until 1997 and has fluctuated slightly since. The live birth rate for the other residents has declined each year from 1991 to 2001.
- In the 11 year period HSDA 51 Northwest had the highest number of Status Indian births (4,895 births or 14.1 per cent of the provincial total). HSDA 14 Thompson Cariboo Shuswap and 52 Northern Interior followed at 3,849 and 3,248 respectively. HSDA 31 Richmond had the lowest number of Status Indian Births at 252.
- The 1991-2001 live birth rates for Status Indians were higher than the rates for other residents in all areas. HSDA 23 South Fraser had the highest live birth rate among Status Indians at 43.3 per 1,000 population, while HSDA 33 North Shore/Coast Garibaldi had the lowest at 19.1 per 1,000 population.

FIGURE 7

STATUS INDIAN AND OTHER RESIDENTS
BRITISH COLUMBIA, 1991 - 2001

Note: HSDAs with less than three cases are not shown.
 Status Indian rate with 95% confidence interval.

LOW BIRTH WEIGHT BIRTHS

Low birth weight live births have a weight of less than 2,500 grams.

- There were 1,924 Status Indian live births with low birth weight in the period 1991-2001. This resulted in a Status Indian low birth weight (LBW) rate of 55.4 per 1,000 Status Indian live births, slightly higher than the LBW rate of 49.8 for other residents. The Status Indian population accounted for less than one out of every 12 low birth weight births in the province.
- Status Indian low birth weight rates for 1991-2001 ranged from 39.7 per 1,000 Status Indian live births in HSDA 31 Richmond to 75.6 in HSDA 32 Vancouver.

FIGURE 10
STATUS INDIAN LOW BIRTH WEIGHT RATE BY HEALTH SERVICE DELIVERY AREA
BRITISH COLUMBIA, 1991 - 2001

Notes: Low Birth Weight <2,500 grams.

Rate per 1,000 live births.

Map produced by BC Vital Statistics Agency based on boundary files supplied by BC Stats.

PREMATURE BIRTHS

Premature live births have a gestational age of less than 37 weeks.

- Status Indians had 3,118 premature live births between 1991-2001. The Status Indian premature birth rate was 89.8 per 1,000 Status Indian live births, which was almost one and a half times the rate of 61.8 per thousand live births for other residents. One out of 10 premature live births in B.C. was a Status Indian baby.
- The 1991-2001 premature rates for Status Indian live births were higher than the rates for other residents in all areas except Richmond. Status Indian premature rates ranged from 59.5 per 1,000 Status Indian live births in HSDA 31 Richmond to 124.2 in HSDA 32 Vancouver.

FIGURE 11
PREMATURE BIRTH RATE BY HEALTH SERVICE DELIVERY AREA
STATUS INDIAN AND OTHER RESIDENTS
 BRITISH COLUMBIA, 1991 - 2001

Note: HSDAs with less than three cases are not shown.
 Status Indian rate with 95% confidence interval.

BIRTHS BY CESAREAN SECTION

- A total of 5,995 Status Indian live births were delivered by cesarean section in B.C. in 1991-2001. The Status Indian cesarean section rate of 172.6 per 1,000 Status Indian live births was 20% lower than the rate for other residents (217.1). One out of every 17 live births delivered by cesarean section was a Status Indian.

FIGURE 12
CESAREAN SECTION RATE
STATUS INDIAN AND OTHER RESIDENTS

Note: Status Indian rate with 95% confidence interval.

FIGURE 13
CESAREAN SECTION RATE BY HEALTH SERVICE DELIVERY AREA
STATUS INDIAN AND OTHER RESIDENTS
BRITISH COLUMBIA, 1991 - 2001

Note: HSDAs with less than three cases are not shown.
 Status Indian rate with 95% confidence interval.

- The 1991-2001 Cesarean Section rates for Status Indian live births were lower than the rates for other residents in all areas except Richmond and Northeast. The highest rate of cesarean section among the Status Indian population was 230.2 per 1,000 live births in HSDA 31 Richmond; the lowest rate was 147.4 in HSDA 32 Vancouver.

BIRTHS TO TEENAGE MOTHERS

A teenage mother is less than 20 years of age at the time of delivery of her baby.

- From 1991 to 2001, more than one in four teenage mothers in the province was a Status Indian. There were 6,471 live births to Status Indian women under the age of 20 years old in this period of time. The Status Indian live birth rate for teenage mothers was 186.3 per 1,000 live births, over four and a half times the rate for other residents (40.4).

FIGURE 14
LIVE BIRTH RATE TO TEENAGE MOTHERS
STATUS INDIAN AND OTHER RESIDENTS

STATUS INDIAN AND OTHER RESIDENTS
BRITISH COLUMBIA, 1991 - 2001

Note: HSDAs with less than three cases are not shown. Status Indian rate with 95% confidence interval.

- The 1991-2001 teenage mother birth rates for Status Indians were ranged from more than twice as high as the rates for other residents (in HSDA 11/12 East Kootenay / Kootenay Boundary) to nearly nine times the rate for other residents (in HSDA 32 Vancouver). The highest Status Indian rate of live births to teenage mothers was in HSDA 43 North Vancouver Island (with 238.0 per 1,000 Status Indian live births) and the lowest was in 31 Richmond with 67.5 births to teenage mothers per 1,000 live births.

FIGURE 16

BRITISH COLUMBIA, 1991 - 2001

Notes: Teenage Mothers <20 years old.
 Rate per 1,000 live births.
 Map produced by BC Vital Statistics Agency based on boundary files supplied by BC Stats.

BIRTHS TO OLDER MOTHERS (ELDERLY GRAVIDA)

An older mother (elderly gravida) is any woman who was 35 years of age or older at the time of delivery of her baby.

- There were 2,614 babies born to Status Indian women aged 35 years or older in 1991-2001, for an elderly gravida rate of 75.3 per 1,000 Status Indian live births. This rate was less than half the elderly

FIGURE 17

BRITISH COLUMBIA, 1991 - 2001

Note: HSDAs with less than three cases are not shown.
Status Indian rate with 95% confidence interval.

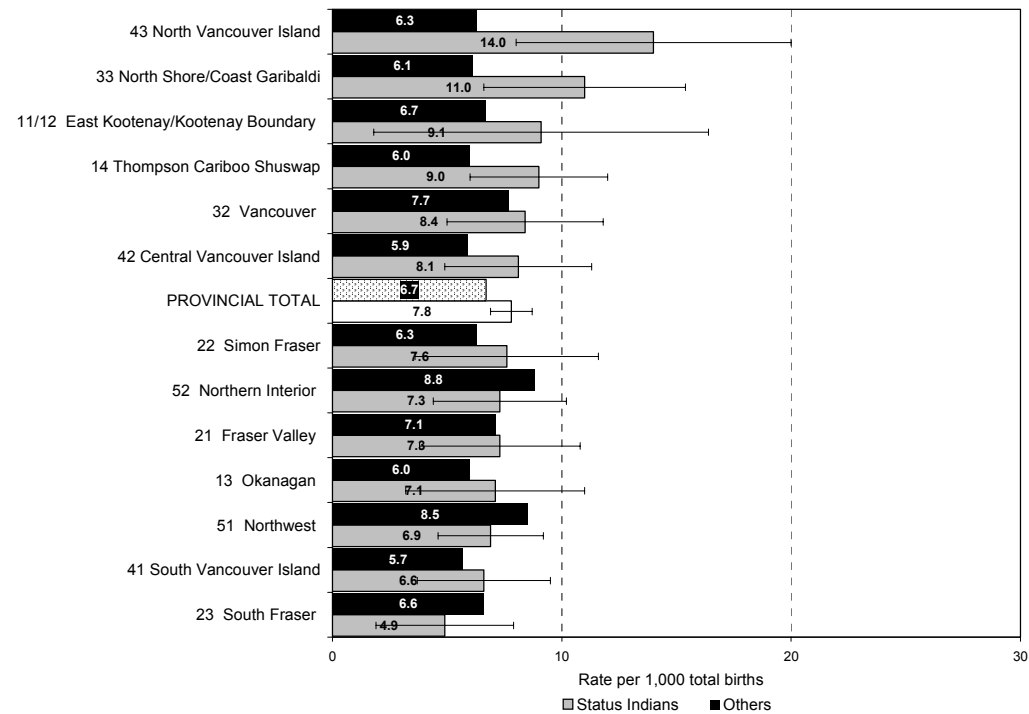

gravida rate for other residents (159.1). The Status Indian population accounted for less than one in 28 elderly gravida live births. The rate of live births to women 35 or older showed an increasing trend from 1991 to 2001 in both populations.

- The 1991-2001 elderly gravida rates for Status Indians ranged from about a third of the rate for other residents (in HSDA 33 North Shore/Coast Garibaldi) to almost three quarters the rate for other residents (in HSDA 11/12 East Kootenay / Kootenay Boundary). The highest Status Indian elderly gravida rate was 111.1 per 1,000 live births in HSDA 31 Richmond; the lowest was 45.3 in HSDA 52 Northern Interior.

STILLBIRTHS

- In 1991-2001, there were 273 Status Indian stillbirths for a rate of 7.8 per 1,000 total births (live births plus stillbirths) in the Status Indian population. The Status Indian stillbirth rate was slightly higher than the rate for other residents (6.7).
- The highest Status Indian stillbirth rates were in HSDA 43 North Vancouver Island (14.0 per 1,000 total births) and 33 North Shore/Coast Garibaldi (11.0). There were no Status Indian stillbirths in HSDA 31 Richmond in the 11 year period, and only four in 53 Northeast, the HSDA with the lowest non-zero Status Indian stillbirth rate (3.0).

FIGURE 19

 Status Indian rate with 95% confidence interval.

OVERVIEW OF INFANT MORTALITY STATISTICS

Infant mortality is a widely used measure of health status. This section examines infant mortality for Status Indians and other residents at the provincial and Health Service Delivery Area (HSDA) levels. Deaths are assigned to geographic areas based on the usual residence postal code. If the usual residence postal code is missing or invalid, the usual residence city is used. The mother's usual residence address is used for geographic assignment for infants who did not leave the hospital. Appendix 3 provides the number of infant deaths and mortality rates in the early neonatal, neonatal, and post neonatal periods. Selected causes of infant deaths and stillbirths are presented in Table 4, and infant mortality by age of mother and birth weight is shown in Table 5.

INFANT MORTALITY

- From 1991-2001, one out of every eight infant deaths (age under one year old) in the province was a Status Indian baby. In total, 322 of the 2,453 infant deaths in the 11 year period were Status Indian infants. The Status Indian infant mortality rate was 9.3 infant deaths per 1,000 Status Indian live births; almost double the rate of 4.7 for other residents. However, these statistics disguise the progress made in infant mortality over the period.

- There has been a significant decrease in infant mortality in the Status Indian population in the last seven years. The number of Status Indian infant deaths dropped from a high of 47 in 1995 to a low of 12 in 1999 and has risen only slightly (to 14) since. The Status Indian infant mortality rate showed a similar dramatic decline from 14.7 infant deaths per 1,000 Status Indian live births in 1995 to 4.0 in 1999 and 2000, and 4.3 in 2001. Infant mortality also declined for other residents in this time period, dropping

FIGURE 20
INFANT MORTALITY RATE
STATUS INDIAN AND OTHER RESIDENTS
BRITISH COLUMBIA, 1991-2001

Note: Status Indian rate with 95% confidence interval.

from 5.2 per 1,000 live births in 1995 to less than 4.0 (3.8 in 1999, 3.7 in 2000, and 3.9 per 1,000 live births in 2001).

- The rate of SIDS in the Status Indian population has dropped over the 11 year period.

FIGURE 21

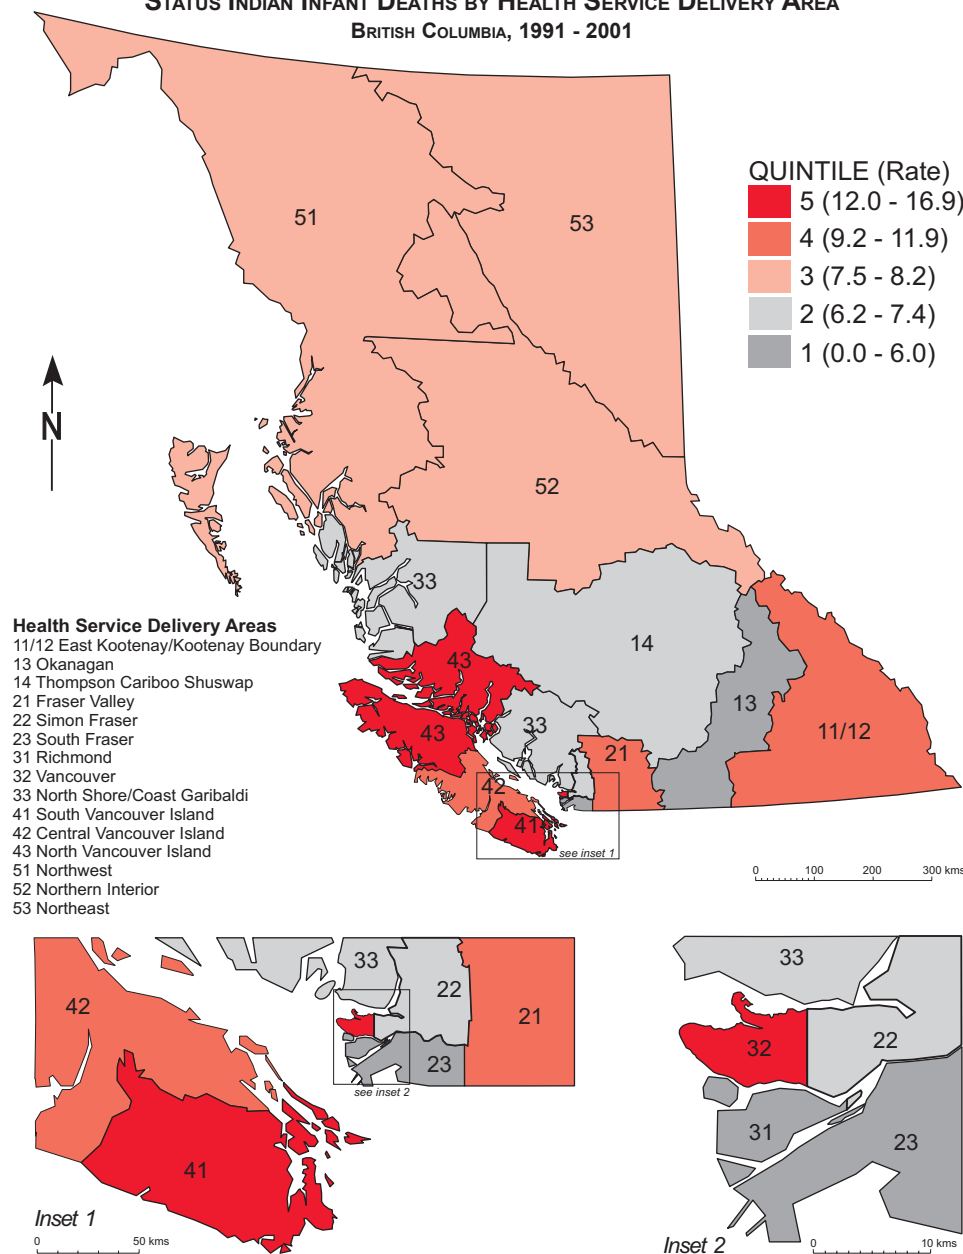

FIGURE 22
INFANT MORTALITY RATE BY HEALTH SERVICE DELIVERY AREA
STATUS INDIAN AND OTHER RESIDENTS
BRITISH COLUMBIA, 1991 - 2001

Note: HSDAs with less than three cases are not shown.
Status Indian rate with 95% confidence interval.

- Status Indian infant mortality rates for 1991-2001 were higher than those for other residents in all areas. HSDA 43 North Vancouver Island had the highest Status Indian infant mortality rate at 16.9 deaths per 1,000 Status Indian live births, more than three times the lowest rate of 5.5 in HSDA 13 Okanagan.

 Map produced by BC Vital Statistics Agency based on boundary files supplied by BC Stats.

INFANT MORTALITY BY AGE AT DEATH

- From 1991 to 2001, there were 124 Status Indian infant deaths in the neonatal period (age at death less than 28 days old), including 102 in the early neonatal period (age at death less than 7 days old). The Status Indian neonatal mortality rate (3.6 deaths per 1,000 Status Indian live births) and the early neonatal mortality rate (2.9) were only slightly higher than the rates for other residents (3.3 and 2.8 respectively).
- The major difference in the pattern of infant deaths in the Status Indian and other populations can be seen in the post neonatal period. More than three out of five Status Indian infant deaths occurred between 28 and 364 days after birth (198 of the 322 infant deaths or 61.5%) compared to three out of ten (644 out of 2,131 infant deaths or 30.2%) for other residents. The Status Indian post neonatal death rate was 5.7 per 1,000 live births, more than four times the post neonatal death rate of 1.4 for other residents.
- Most of the recent gains in Status Indian infant mortality rates have occurred in the post neonatal period. The highest post neonatal infant death rate was 10.7 per 1,000 live births in 1995, but by 2000 this had fallen to 1.2 per 1,000 live births before rising to 2.2 per 1,000 in 2001.

- Status Indian 1991-2001 post neonatal mortality was highest in the HSDA 43 North Vancouver Island, where the rate (13.6 per 1,000 live births) was eight and a half times the rate for other residents (1.6). The Status Indian post neonatal mortality rate for HSDA 43 North Vancouver Island was more than four times the lowest rate (3.0 in HSDA 23 South Fraser).

CAUSES OF INFANT DEATHS

- Sudden Infant Death Syndrome (SIDS) was the leading cause of infant mortality in the Status Indian population, accounting for more than a third (36.0%) of all Status Indian infant deaths. Between 1991 and 2001, 116 of the 378 SIDS deaths in the province were Status Indian children. The infant mortality rate for SIDS in the Status Indian population was 33.4 deaths per 10,000 live births, almost six times the rate of 5.8 for other residents. Since most SIDS deaths occur between 28 and 364 days after birth, SIDS is the major cause of post neonatal mortality.

- Perinatal complications were responsible for three quarters (77.5%) of infant deaths of Status Indian babies in the first week of life (early neonatal period), and one quarter (28.6%) of all Status Indian infant deaths in 1991-2001. The Status Indian infant mortality rate from perinatal complications was 26.5 deaths per 10,000 live births, slightly higher than the rate for other residents (21.9).
- Congenital anomalies were responsible for roughly one in ten Status Indian infant deaths (38 out of 322 deaths or 11.8%) in 1991-2001. The Status Indian infant mortality rate for congenital anomalies, 10.9 deaths per 10,000 live births, was below the rate of 13.3 for other residents.
- Although there were only 12 Status Indian infant deaths from pneumonia/ influenza in the 11 year period, the Status Indian mortality rate (3.5 per 10,000 live births) was more than seventeen times higher than the rate for other residents (0.2).

INFANT MORTALITY BY AGE OF MOTHER AND BIRTH WEIGHT

- In the 1991-2001 period, there were 226 infant deaths where the mother was under 20 years of age, and a third (75 deaths or 33.2%) were Status Indians. Of all maternal age groups, teenage mothers had the highest infant mortality rates in both populations. The Status Indian infant mortality rate for teenage mothers was 11.6 infant deaths per 1,000 live births of Status Indian babies, compared to 8.3 for other residents.
- Status Indian mothers tend to be younger than other B.C. mothers, therefore it is not surprising that more than half the Status Indian infant deaths (177 out of 322 deaths or 55.0%) were to mothers under 25 years of age, compared to a quarter (552 out of 1,131 deaths or 25.9%) for other residents.
- Low birth weight is less of a factor in infant deaths among the province's Status Indian population than it is for other residents. Approximately two out of five Status Indian infant deaths in 1991-2001 had birth weights below 2,500 grams (127 out of 322 deaths or 39.4%), compared to three out of five (1,218 out of 2,131 deaths or 57.2%) for other residents.

Rates per 1,000 live births in the specified age group.

Status/Other is the ratio of the Status Indian rate to the rate of Other residents.

++ Rate not shown for less than three deaths.

This section examines the mortality statistics for each of the major cause of death categories for Status Indians and other residents at the provincial and Health Service Delivery Area (HSDA) levels. Deaths are assigned to geographic areas based on the usual residence postal code of the decedent. If the usual residence postal code is missing or invalid, the usual residence city is used. Annual data by Health Service Delivery Areas are provided in Appendix 3 Birth and Death Related Summary Statistics, but are generally not included in the analysis because of the small numbers involved. Table 6 shows leading causes of death for Status Indians and other residents ranked by age standardized mortality rate (ASMR), and Table 7 presents leading causes of death for Status Indian and other residents in each HSDA for 1991-2001. Appendix 4 presents age standardized mortality rates by HSDA and Appendix 5 provides potential years of life lost (age under 75 years) by HSDA. Causes of death by age group and HSDA can be found in Appendix 6. Appendix 7 has ASMR trends analysis for selected causes of death.

ALL CAUSES OF DEATH

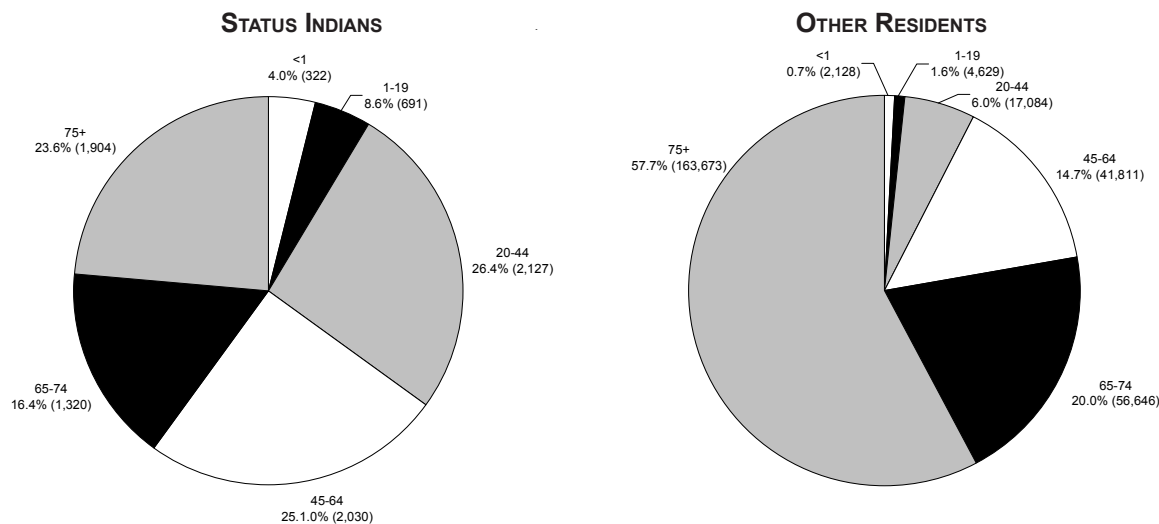

- Over the period 1991 to 2001, there were 8,072 Status Indian deaths, or about was one out of every 36 deaths in the province. The Status Indian Age Standardized Mortality Rate (ASMR) was 102.2 per 10,000 standard population, more than one and a half times the rate of 60.8 for other residents.
- There were 4,611 male and 3,461 female deaths in the Status Indian population in the 11 year period. The ASMR for males was 120.0 per 10,000 standard population for Status Indians and 74.5 for other B.C. male residents. For females, the ASMRs were 86.3 and 49.4 respectively.
- The Status Indian population had higher mortality in the younger age groups. In the 11 year period, 8.6% of the Status Indian deaths were children (age 19 years or younger) compared to only 1.6% in this age group for other residents. Similarly, seniors (age 65 or older) accounted for only 39.9% of Status Indian deaths but 77.6% of other residents.

FIGURE 24
ASMRs FOR ALL CAUSES OF DEATH
STATUS INDIAN AND OTHER RESIDENTS
BRITISH COLUMBIA, 1991-2001

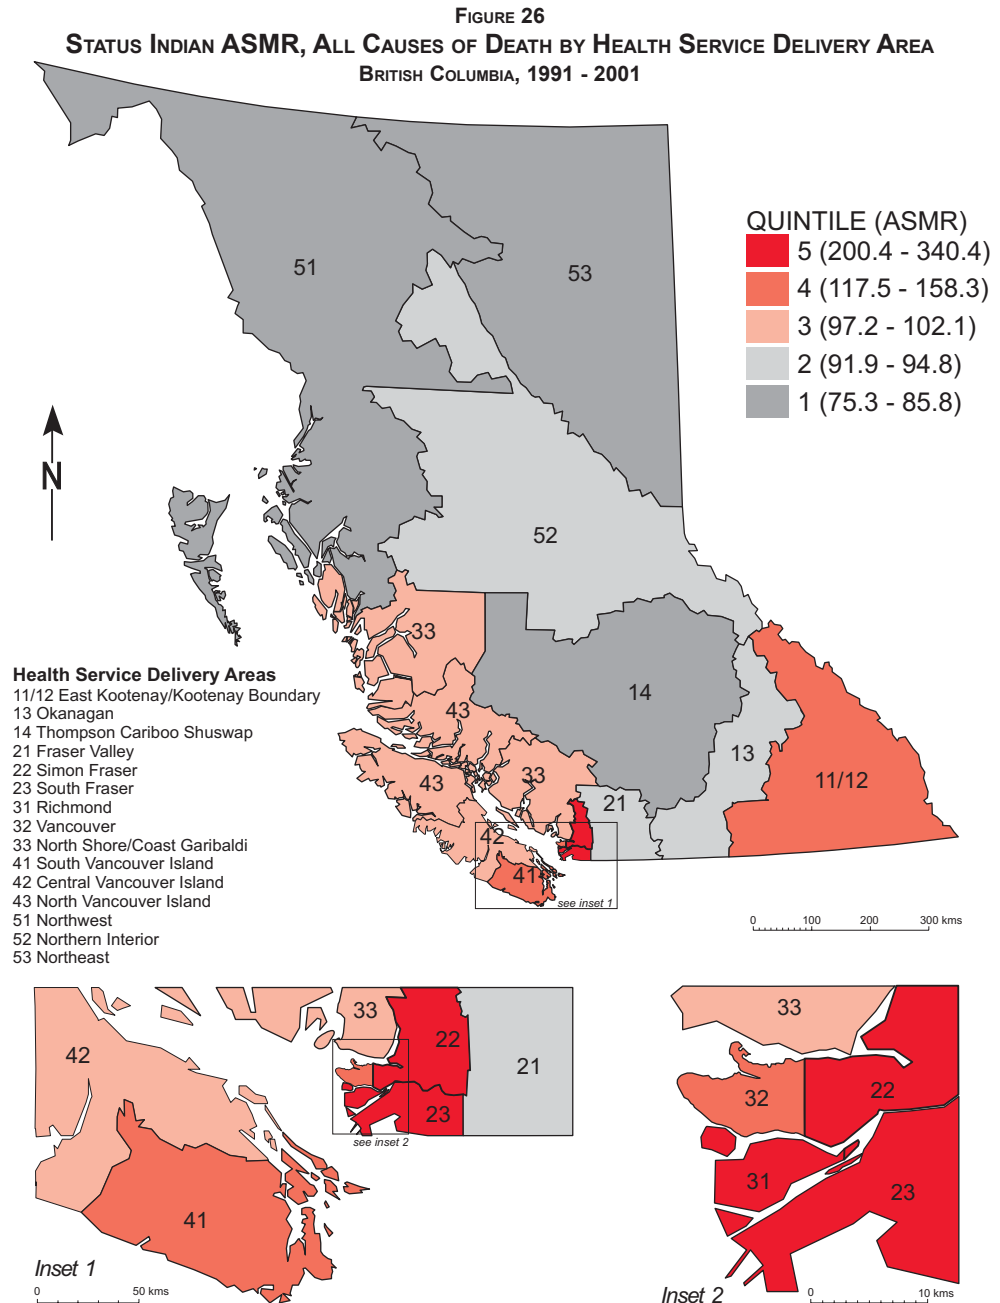

Note: Status Indian rate with 95% confidence interval.

FIGURE 25
MORTALITY BY AGE GROUPS
BRITISH COLUMBIA, 1991-2001

- There were 6,168 Status Indians who were under the age of 75 years at the time of death. This represented 4.9% of the 126,338 ‘premature’ deaths in the province in 1991-2001. However, since the Status Indians are generally in the younger age groups, the Status Indian deaths accounted for 8.2% of the potential years of life lost in the province.
- The 1991-2001 age standardized mortality rate for Status Indians in HSDA 22 Simon Fraser Health Region at 340.4 per 10,000 standard population, was more than three times the provincial Status Indian ASMR (102.2). HSDA 51 Northwest had the lowest Status Indian ASMR rate for all causes of death (75.3 per 10,000 standard population).
- There were only 11 maternal deaths to all B.C. residents during the 11 year period from 1991 to 2001; two of these were Status Indian women.

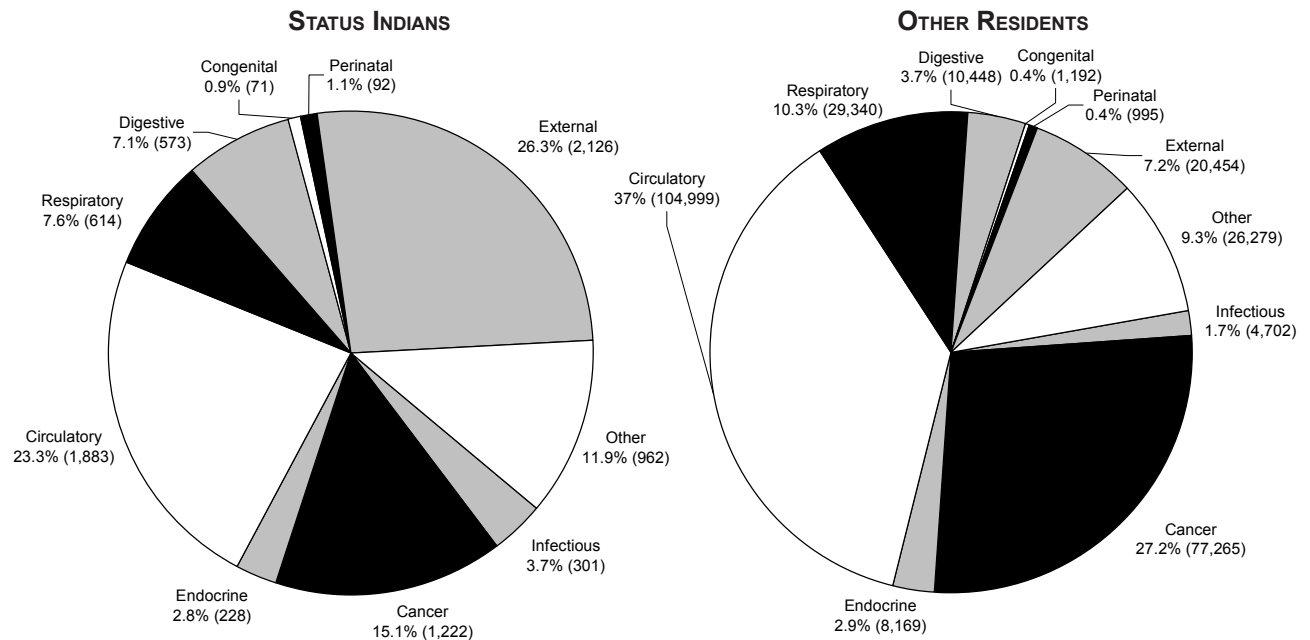

Notes: ASMR - Age Standardized Mortality Rate per 10,000 standard population.
Cases with unknown usual residence are excluded.
Map produced by BC Vital Statistics Agency based on boundary files supplied by BC Stats.

CAUSE OF DEATH TRENDS

- The 1991-2001 ASMRs for all circulatory system disease deaths, as well as the deaths due to ischemic heart disease, cerebrovascular disease, and diseases of the arteries, showed a statistically significant decreasing trend for both Status Indians and other residents.
- External causes of death, as well as motor vehicle accident fatalities, suicide, and homicide, also showed statistically significant decreasing trends for both Status Indians and other residents over the 11 year period.
- A statistically significant decreasing trend for Status Indians and other residents was also found for all causes of death and for cancer deaths.
- The ASMR for deaths from tuberculosis showed a statistically significant increasing trend over the 11 year period in the Status Indian population.
- A statistically significant decreasing trend in all respiratory system disease deaths, as well as in deaths due to pneumonia and influenza, was found in the Status Indian population.

FIGURE 27
MAJOR CAUSES OF DEATH
BRITISH COLUMBIA, 1991-2001

LEADING CAUSES OF DEATH

- The causes of death responsible for the largest number of Status Indian deaths in 1991-2001 were ischemic heart disease (841 deaths), motor vehicle accidents (520) accidental poisoning (478), suicide (421), and cerebrovascular disease (413).
- In the provincial Status Indian population, the leading causes death based on age standardized mortality rates were ischemic heart disease, cerebrovascular disease, gastrointestinal cancers, pneumonia/influenza, and cancer of the

respiratory system. These were also the top five causes of death for other residents in a slightly different order, with cancer of the respiratory system ranked higher than gastrointestinal cancers and pneumonia/influenza. Together, these five categories accounted for more than one quarter of Status Indian deaths and almost half of the deaths to other residents between 1991 and 2001.

- From 1991 to 2001, ischemic heart disease was the leading cause of death based on ASMR for all B.C. residents. Out of the 54,115 deaths from this cause

Notes: ASMR - Age Standardized Mortality Rates per 10,000 standard population. Deaths with gender unknown are excluded.

Status/Other is the ratio of the Status Indian 1991-2001 ASMR to the rate of Other Residents.

Order based on the ASMR rank for Status Indians. In case of ties, the cause with the larger number of deaths has the higher rank.

*ICD-10 codes V02-V04, V09, V12-V14, V19.0-V19.6, V20-V79, V80.3-V80.5, V82.0-V82.1, V82.3-V89.0, V89.2, V89.9, Y85.0.

over the 11 year period, 841 were Status Indians. The Status Indian ASMR was 14.2 per 10,000 standard population, compared to the rate for other residents of 11.2.

- The other causes of death in the Status Indian top ten causes based on ASMR were, from sixth to tenth place respectively, motor vehicle accidents, accidental poisoning, chronic liver disease/cirrhosis, suicide, and congestive heart failure. None of these were among the top ten causes for other residents except for congestive heart failure, which was ranked ninth for other residents.
- Overall, accidents and violence categories (motor vehicle accidents, accidental poisoning, suicide, and accidental falls) and diseases affecting the digestive or urinary system (chronic liver disease/cirrhosis and renal failure, nephritis, nephrosis) ranked higher in the Status Indian list of age standardized causes of death, and had ASMRs that were at least double the rates for other residents. On the other hand, the ASMRs for cancers were generally similar in the two populations, and ranked lower in the Status Indian list of leading causes.

Notes: Causes of death are the top 15 for Status Indians based on the ASMR..

*Provincial total represents the rank for the specified cause of death for Status Indians or Other Residents.

- Among other causes of death of interest, the Status Indian populations had ASMRs for homicide, accidents caused by fire/flames, and accidental drowning that were between four and seven times higher than the rates for other residents.
- Ischemic heart disease was the leading cause of death based on ASMR for both Status Indians and other residents in each HSDA.
- Leading causes of death based on ASMR found regionally in the top five for the Status Indian population but not in the top five for other residents in the specified Health Service Delivery Areas included motor vehicle accidents, accidental poisoning, suicide, chronic liver disease/cirrhosis, suicide, congestive heart failure, diabetes, and female breast cancer.

INFECTIOUS/PARASITIC DISEASES

Infectious and parasitic diseases include HIV disease, tuberculosis, hepatitis, septicemia, and other infections.

- From 1991 to 2001, there were 301 Status Indian deaths from infectious and parasitic diseases. These deaths included 16 children (under 20 years of age) and 52 seniors (65 years or older). The Status Indian ASMR for infectious/parasitic diseases was 2.9 per 10,000 standard

population, more than double the rate (of 1.1) for other residents. HIV disease accounted for approximately half the deaths from infectious diseases in both populations.

- HIV disease claimed 167 Status Indian lives in the 1991-2001 period, 130 of which were males. The Status Indian ASMR for deaths from HIV disease was 1.3 deaths per 10,000 standard population. In comparison, the ASMR for other residents was 0.5.

FIGURE 28

STATUS INDIAN AND OTHER RESIDENTS
BRITISH COLUMBIA, 1991 - 2001

Note: HSDAs with less than three cases are not shown.
 Status Indian rate with 95% confidence interval.

- The 1991-2001 Status Indian ASMRs for deaths from infectious and parasitic diseases were equal to or higher than the rates for other residents in all areas. HSDA 32 Vancouver had the highest mortality rates for infectious/parasitic diseases, 9.5 per 10,000 standard population for the Status Indian population and 2.7 for the other residents in the area. HSDA 11/12 East Kootenay/Kootenay Boundary had the lowest ASMR for infectious and parasitic disease deaths in the Status Indian population (0.5 per 10,000 standard population). HSDA 11/12 East Kootenay/Kootenay Boundary, 53 Northeast, and 31 Richmond had less than three Status Indian deaths from infectious/parasitic diseases in 1991-2001 and are not shown in the graph.

CANCER

- There were 1,222 Status Indian deaths from cancer (or malignant neoplasms) in the 1991-2001 period or about one in seven Status Indian deaths. The Status Indian ASMR for cancer (18.6 deaths per 10,000 standard population) was higher than the rate of 16.7 for other residents.
- Cancer claimed younger lives in the Status Indian population: 71.0% of Status Indian cancer deaths were under 75 years of age, compared to 57.3% of other residents of this age who died from cancer.

FIGURE 30
ASMRs FOR DEATHS DUE TO CANCER
STATUS INDIAN AND OTHER RESIDENTS
BRITISH COLUMBIA, 1991-2001

Note: Status Indian rate with 95% confidence interval.

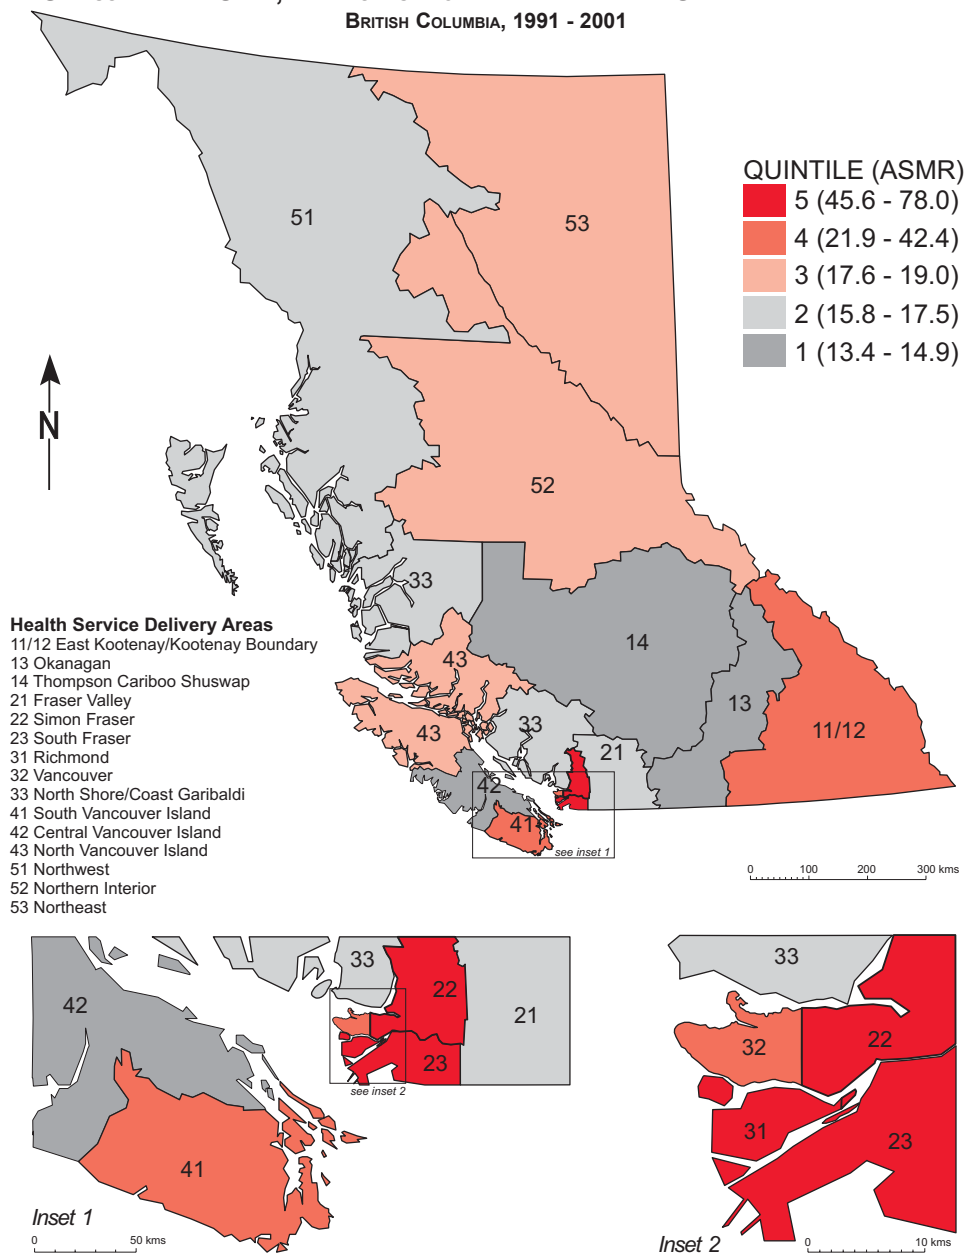

FIGURE 31

STATUS INDIAN AND OTHER RESIDENTS
BRITISH COLUMBIA, 1991 - 2001

Note: HSDAs with less than three cases are not shown.
Status Indian rate with 95% confidence interval.

- HSDA 22 Simon Fraser had the highest 1991-2001 Status Indian ASMR for cancer (78.0 per 10,000 standard population); HSDA 14 Thompson/Cariboo had the lowest rate for Status Indians (13.4 per 10,000 standard population).

FIGURE 32
STATUS INDIAN ASMR, DEATHS DUE TO CANCER BY HEALTH SERVICE DELIVERY AREA
BRITISH COLUMBIA, 1991 - 2001

- Colorectal cancer claimed 122 Status Indian lives between 1991 and 2001. The ASMR for this specific cause of death was 2.0 deaths per 10,000 standard population, slightly above the rate of 1.5 for other residents.
- In the 11 year period, 95 Status Indian women died from breast cancer and 20 died from cervical cancer. The Status Indian ASMR for female breast cancer (2.4 per 10,000 standard population) was almost the same as the rate for other residents (2.5), while the rate for cervical cancer (0.4) was twice the rate (0.2) for other residents. Among Status Indian women, 90.0% of the deaths from cervical cancer and 78.9% of the deaths from breast cancer were aged 75 years or younger. For other residents, the corresponding proportions were 78.3% and 64.6%.
- There were 74 deaths from prostate cancer in the Status Indian population in the 1991-2001 period. The Status Indian ASMR for prostate cancer was 2.9 per 10,000 standard population, slightly higher than the rate of 2.6 for other residents.

Notes: ASMR - Age Standardized Mortality Rate per 10,000 standard population.
 Cases with unknown usual residence are excluded. Cases with gender unknown are excluded.
 Map produced by BC Vital Statistics Agency based on boundary files supplied by BC Stats.

ENDOCRINE/NUTRITIONAL/METABOLIC DISEASES

Endocrine, nutritional, and metabolic diseases and immunity disorders include diabetes, cystic fibrosis, and nutritional deficiencies.

- There were 228 Status Indian deaths from endocrine, nutritional, and metabolic diseases and immunity disorders in the 1991-2001 period, and 8,169 deaths from this cause among other residents of the province. The Status Indian ASMR for endocrine/nutritional/metabolic diseases was 3.5 deaths per 10,000 standard population, more than twice the rate of 1.7 for other residents.

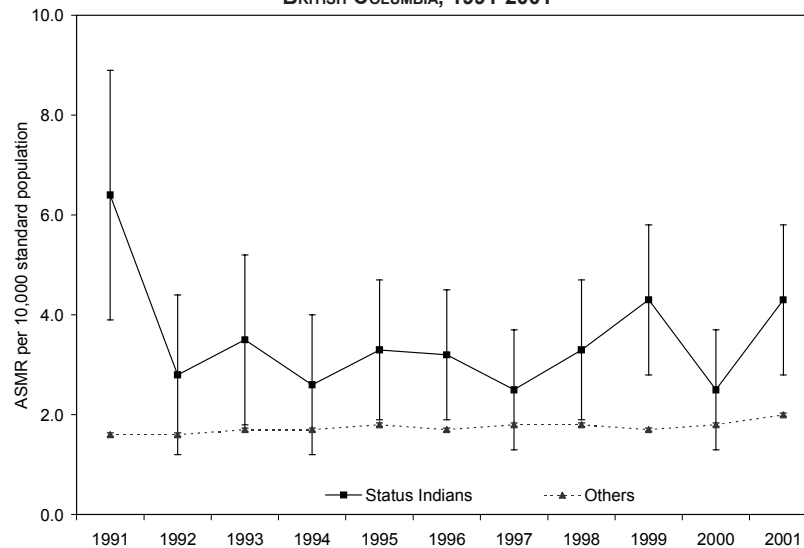

- Diabetes was responsible for most of the deaths from endocrine, nutritional, and metabolic diseases and immunity disorders (71.1% of Status Indian and 75.2% of other resident deaths). There were 162 Status Indian deaths from diabetes between 1991 and 2001. The ASMR for diabetes in the Status Indian population (2.6 per 10,000 standard population) was double the rate for other residents (1.3).

CIRCULATORY SYSTEM DISEASES

Circulatory system diseases include heart disease, cardiovascular disease, diseases of the arteries, cardiac dysrhythmias, cardiomyopathies, and congestive heart failure.

- There were 1,883 Status Indian deaths from circulatory system diseases in the 1991-2001 period. This cause of death was responsible for almost a quarter (23.3%) of Status Indian deaths in the 11 years and over one third (37.0%) of deaths of other residents. The Status Indian ASMR for deaths from circulatory system diseases (31.1 deaths per 10,000 standard population) was almost 40% higher than the rate of 21.9 for other residents.
- Ischemic heart disease was the leading cause of death based on ASMR for Status Indians and other residents at the provincial level and in every health service delivery area. There were 841 Status Indian deaths from ischemic heart disease in 1991-2001, producing an ASMR of 14.2 per 10,000 standard population, compared to an ASMR of 11.2 for other residents.

FIGURE 33
ASMRs FOR ALL ENDOCRINE DEATHS
STATUS INDIAN AND OTHER RESIDENTS
BRITISH COLUMBIA, 1991-2001

Note: Status Indian rate with 95% confidence interval.

- Cerebrovascular disease was second leading cause of death based on ASMR for both Status Indians and other residents. There were 413 Status Indian deaths in 1991-2001 from cerebrovascular disease, producing an ASMR of 6.9 per 10,000 standard population), compared to 4.8 for other residents. In both populations, the ASMRs for cerebrovascular disease were approximately half the rates for ischemic heart disease.
- The 1991-2001 Status Indian ASMR for ischemic heart disease deaths in HSDA 11/12 East Kootenay/Kootenay Boundary

FIGURE 34

was more than twice the rate for other residents (30.4 per 10,000 standard population compared to 12.1). In 23 South Fraser the Status Indian ASMR was more than three times the rate for other residents (40.9 compared to 11.6); and in 22 Simon Fraser and 31 Richmond, Status Indian rates were more than five times the rates for the other residents (67.8 and 68.4 for Status Indians compared to 12.4 and 10.3 respectively).

FIGURE 36

 Map produced by BC Vital Statistics Agency based on boundary files supplied by BC Stats.

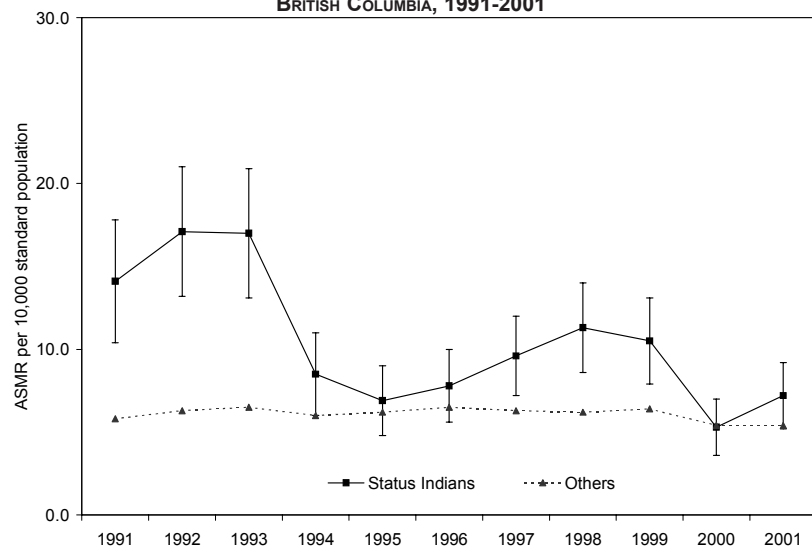

RESPIRATORY SYSTEM DISEASES

Respiratory system diseases include pneumonia, influenza, chronic bronchitis, emphysema, asthma, and other chronic airway obstructions.

- From 1991 to 2001, there were 614 Status Indian deaths from respiratory system diseases. The Status Indian ASMR for this cause of death was 9.9 per 10,000 standard population, compared to rate of 6.1 for other residents of the province.
- More than half of the Status Indian deaths from respiratory system diseases were from pneumonia/influenza (324 deaths). Pneumonia/influenza was the fourth cause of death in the Status Indian population with an ASMR of 5.1 per 10,000 standard population, almost double the rate of 2.7 for other residents.
- Chronic lung disease (chronic bronchitis, emphysema and chronic obstructive pulmonary disease) caused 146 deaths in the Status Indian population between 1991 and 2001. The Status Indian ASMR was 2.7 deaths per 10,000 standard population, slightly higher than the rate of 2.4 for other residents.

- The Status Indian ASMR for pneumonia/ influenza deaths was higher than the rate for other residents in every HSDA except Richmond, where there were no Status Indian deaths from this cause in 1991-2001. HSDA 22 Simon Fraser had the highest rate of Status Indian deaths from pneumonia/influenza (22.5 per 10,000 standard population), more than seven times the ASMR for other residents in this area (3.1).

Note: HSDAs with less than three cases are not shown.
 Status Indian rate with 95% confidence interval.

DIGESTIVE SYSTEM DISEASES

Digestive system diseases include chronic liver disease/cirrhosis, ulcers, enteritis and colitis, and gastrointestinal hemorrhages.

- There were 573 deaths in the Status Indian population from digestive system diseases in the 1991-2001 period. The Status Indian ASMR for this broad category was 7.4 deaths per 10,000 standard population, more than three times the rate of 2.2 for other residents.

FIGURE 39
ASMRs FOR ALL DIGESTIVE SYSTEM DISEASE DEATHS
STATUS INDIAN AND OTHER RESIDENTS

STATUS INDIAN AND OTHER RESIDENTS
BRITISH COLUMBIA, 1991 - 2001

Note: HSDAs with less than three cases are not shown.
 Status Indian rate with 95% confidence interval.

- The largest sub-category of digestive system diseases was chronic liver disease/cirrhosis which ranked eighth in the list of leading causes of death by ASMR in the Status Indian population, compared to twenty-third for other residents. There were 285 Status Indian deaths from this cause in the 1991-2001 period for an ASMR of 3.2 deaths per 10,000 standard population, more than five times the ASMR of 0.6 for other residents.

- The Status Indian ASMR for chronic liver disease/cirrhosis deaths was at least twice the rate for other residents in every area except Richmond, where there were no Status Indian deaths from this cause in 1991-2001. In HSDA 32 Vancouver and 11/12 East Kootenay/Kootenay Boundary (the areas with the highest Status Indian ASMRs for chronic liver disease/cirrhosis deaths) the rates were more than seven times those for other residents (5.9 and 5.4 per 10,000 standard population for Status Indians compared to 0.8 and 0.7 respectively). In HSDA 13 Okanagan the Status Indian ASMR was more than ten times the rate for other residents (5.1 per 10,000 standard population compared to 0.5).

CONGENITAL ANOMALIES

This category consists of birth defects and chromosomal anomalies including Down's Syndrome.

- In the 1991-2001 period, there were 71 deaths from congenital anomalies in the Status Indian population. The ASMR for this cause was 0.4 per 10,000 standard population for Status Indians and 0.3 for other residents.

PERINATAL CONDITIONS

Deaths from conditions originating in the perinatal period (perinatal complications) include obstetric complications, immaturity, birth asphyxia, and respiratory distress syndrome.

- There were 92 Status Indian deaths from perinatal conditions in the 1991-2001 period, for an ASMR of 0.4 per 10,000 standard population, almost the same as the rate for other residents of the province (0.3).

ACCIDENTS AND VIOLENCE (EXTERNAL CAUSES OF DEATH)

Deaths from external causes include motor vehicle accident fatalities, accidental deaths from drowning, poisoning, falls, and fire, and deaths from intentional injuries such as suicide and homicide.

FIGURE 41
ASMRs FOR ALL EXTERNAL CAUSES OF DEATH
STATUS INDIAN AND OTHER RESIDENTS
BRITISH COLUMBIA, 1991 - 2001

Note: Status Indian rate with 95% confidence interval.

- Accidents and violence accounted for 2,126 Status Indian deaths or a quarter (26.3%) of the Status Indian deaths in the 11 years. Among other residents, less than one in ten (7.2%) was from external causes. The Status Indian ASMR for accidents and violence, 16.9 deaths per 10,000 standard population, was three and a half times the rate for other residents (4.8).
- Accidents and violence were the cause of death for more than two out of five children and three out of five 20 year olds in the Status Indian population (42.8% of Status Indian deaths under age 20 and 61.1% of deaths age 20-29). Among other residents, accidents and violence were responsible for more than a third (34.8%) of the deaths under age 20 and half (51.3%) the deaths of 20 year olds.
- Approximately seven out of ten deaths from accidents and violence were males (67.5% of Status Indian and 69.9% of other resident deaths).
- The average Potential Years of Life Lost (PYLL) for deaths from accidents and violence (calculated by dividing the total PYLL by the number of deaths under 75 years of age) was 40.2 years for Status Indians compared to 34.8 years for other residents.

FIGURE 42
PYLLS FOR EXTERNAL CAUSES OF DEATH BY HEALTH SERVICE DELIVERY AREA
STATUS INDIAN AND OTHER RESIDENTS
BRITISH COLUMBIA, 1991 - 2001

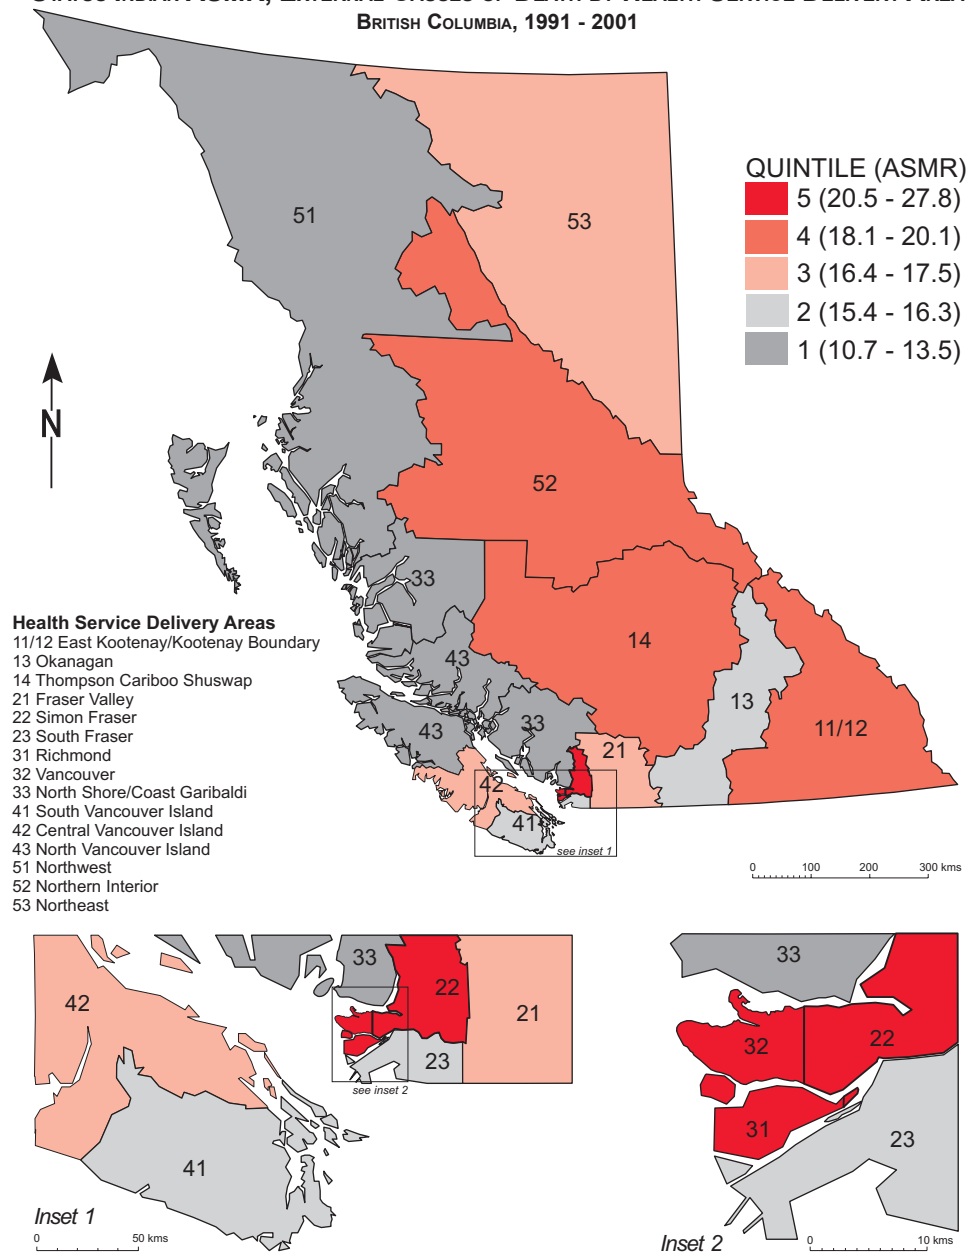

Note: HSDAs with less than three cases are not shown.
 Status Indian rate with 95% confidence interval.

- The 1991-2001 Status Indian ASMRs for external causes of death ranged from more than one and a half to more than seven times the rates for other residents in every area. HSDA 51 Northwest had the lowest Status Indian ASMR for external causes of death (10.7 per 10,000 standard population). This was the only HSDA

where the Status Indian ASMR for external causes of death was less than twice the rate for other residents in the area (6.4 per 10,000 standard population). HSDA 32 Vancouver had the highest Status Indian ASMR for external causes of death (27.8).

FIGURE 43

 Map produced by BC Vital Statistics Agency based on boundary files supplied by BC Stats.

MOTOR VEHICLE ACCIDENTS

- Motor vehicle accidents were responsible for the largest number of Status Indian deaths from external causes (520 deaths) in 1991-2001. The Status Indian ASMR for motor vehicle accidents, 3.9 deaths per 10,000 standard population, was three and a half times the rate for other residents (1.1).
- Two thirds of motor vehicle accident fatalities were males (67.3% of Status Indian and 69.9% of other resident deaths).

FIGURE 44
ASMRs FOR MOTOR VEHICLE TRAFFIC ACCIDENT FATALITIES
STATUS INDIAN AND OTHER RESIDENTS
BRITISH COLUMBIA, 1991 - 2001

STATUS INDIAN AND OTHER RESIDENTS
BRITISH COLUMBIA, 1991 - 2001

Note: HSDAs with less than three cases are not shown. Status Indian rate with 95% confidence interval.

- The 1991-2001 Status Indian ASMRs for motor vehicle accident fatalities were higher than the rates for other residents in all areas. The Status Indian ASMR for motor vehicle accident fatalities was highest in HSDA 53 Northeast (8.0 per 10,000 standard population) and lowest in HSDA 51 Northwest (2.2). HSDA 31 Richmond had less than three Status Indian motor vehicle accident deaths in 1991-2001 and is not shown in the graph.

 Map produced by BC Vital Statistics Agency based on boundary files supplied by BC Stats.

ACCIDENTAL POISONING

Accidental poisoning includes poisoning deaths caused by food, plants, chemicals, alcohol, and drugs.

- Accidental poisoning was responsible for 478 Status Indian deaths in 1991-2001 and had the second highest ASMR among the external cause of death sub-categories (after motor vehicle accidents). The Status Indian ASMR for accidental poisoning deaths (3.5 per 10,000 standard population) was more than four times the rate for other residents (0.8).
- The 1991-2001 average PYLL for accidental poisoning deaths was 37.1 years for Status Indians, similar to the average PYLL years for other residents (35.3 years).
- The 1991-2001 ASMRs for Status Indian accidental poisoning deaths ranged from two to eight times the rates for other residents in the area. HSDA 32 Vancouver had the highest ASMRs for accidental poisoning (14.4 per 10,000 standard population for Status Indians and 1.8 for other residents) and the greatest difference in the rates. Both Vancouver ASMRs were more than double the second highest rates for their respective populations (5.3 in HSDA 23 South Fraser for Status Indians and 0.8 in four areas for other residents).

ACCIDENTAL FALLS

- Of all deaths from accidental falls from 1991 to 2001, about one in 25 was a Status Indian (143 Status Indian deaths out of 3,728). Accidental falls resulting in death occur mainly in the elderly population: three quarters (75.4%) of the deaths from accidental falls were seniors aged 75 or older among other residents, but less than three in ten (29.4%) Status Indian deaths from this cause were in this oldest age group.
- The ASMR for deaths from accidental falls for 1991-2001 was 1.9 per 10,000 standard population for Status Indians and 0.8 for other residents.

- The 1991-2001 average PYLL for premature deaths from accidental falls (under 75 years of age) was 27.4 years for Status Indians compared to 22.2 years for other residents.

SUICIDE

- From 1991 to 2001, there were 421 Status Indian suicides and only two of these were aged 75 or older. The Status Indian ASMR for suicide (2.9 per 10,000 standard population) was more than two and a half times the rate for other residents (1.1). In the Status Indian population, suicide was the third highest sub-category of accidents and violence

FIGURE 47
ASMRs FOR SUICIDE DEATHS
STATUS INDIAN AND OTHER RESIDENTS
BRITISH COLUMBIA, 1991 - 2001

Note: Status Indian rate with 95% confidence interval.

FIGURE 48
ASMRs FOR SUICIDE DEATHS BY HEALTH SERVICE DELIVERY AREA
STATUS INDIAN AND OTHER RESIDENTS
BRITISH COLUMBIA, 1991 - 2001

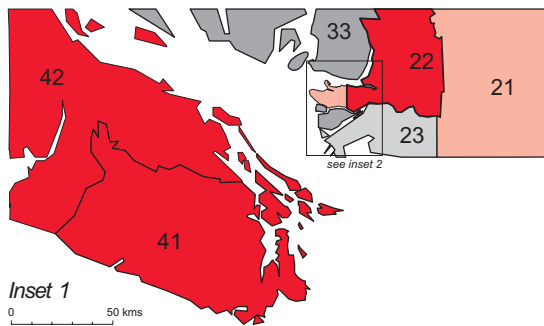

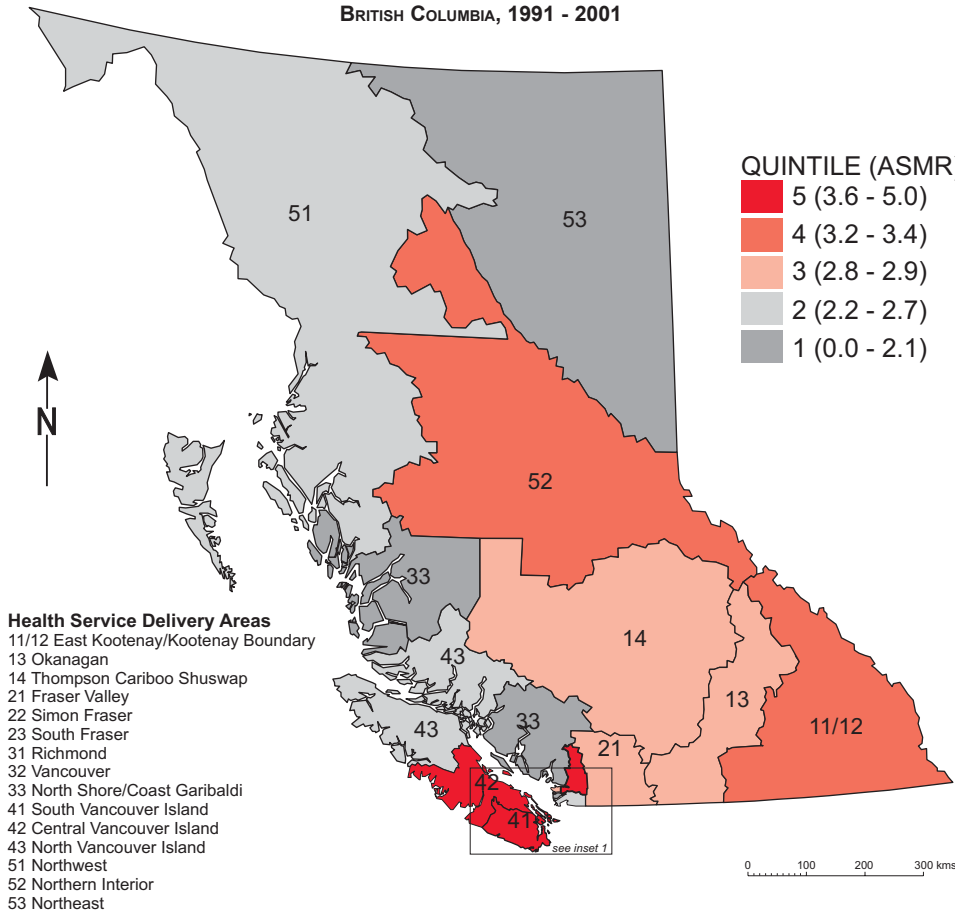

Note: HSDAs with less than three cases are not shown.
 Status Indian rate with 95% confidence interval.

- The suicide rate in 1991-2001 in HSDA 53 Northeast was the same for Status Indians and other residents (1.2 per 10,000 standard population). In all other areas, the ASMRs for Status Indian suicides were higher than the rates for other residents. HSDA 42 Central Vancouver Island had the highest Status Indian suicide rate (5.0 per 10,000 standard population), and HSDA 22 Simon Fraser had the second highest Status Indian suicide rate (3.9). In both these areas, the Status Indian ASMRs were almost four times the rates for other residents (1.3 for other residents in HSDA 42 and 1.0 for other residents in HSDA 22). HSDA 31 Richmond was tied with HSDA 53 Northeast for the lowest Status Indian suicide rate (1.2), but Richmond had less than three Status Indian suicide deaths in the 11 years and is not shown in the graph.

after motor vehicle accidents and accidental poisoning. For other residents in the province, suicide was responsible for the largest number of deaths among all the sub-categories of accidents and violence.

- Males accounted for three quarters of the suicide deaths between 1991 and 2001 in both populations (75.5% of Status Indian and 77.6% of other resident deaths).
- The average PYLL for suicide was 43.5 years for Status Indians compared to 32.3 years for other residents.

FIGURE 49

BRITISH COLUMBIA, 1991 - 2001

Notes: ASMR - Age Standardized Mortality Rate per 10,000 standard population.
 Cases with unknown usual residence are excluded. Cases with unknown gender are excluded.
 Map produced by BC Vital Statistics Agency based on boundary files supplied by BC Stats.

HOMICIDE

- Between 1991 and 2001, there were 151 Status Indian homicides. The Status Indian ASMR for homicides (1.1 per 10,000 standard population) was five and a half times the ASMR for other residents (0.2).
- Most homicide victims were male (61.6% of Status Indians and 67.6% of other residents in 1991-2001).

FIRE AND FLAMES

- Out of 364 deaths from fire and flames in the province between 1991 and 2001, 76 occurred in the Status Indian population. Although the Status Indian ASMR was only 0.7 deaths per 10,000 standard population, this rate was seven times the rate for other residents (0.1).

ALCOHOL-RELATED DEATHS

Alcohol-related deaths include both deaths where the underlying cause of death was directly related to alcohol, such as liver disease/cirrhosis, and ‘indirect’ alcohol deaths where alcohol was noted on the medical certification of death but the underlying cause of death was not due to alcohol. This is the only cause of death category that is not based entirely on the underlying cause of death.

In 1993 the medical certification of death was revised to include a question about environmental, occupational, and lifestyle factors that may have contributed to the death. The revised forms were not used for the majority of deaths until several years later. As a result, the number of deaths indirectly related to alcohol has increased since 1993.

- There were 1,911 alcohol-related deaths in the Status Indian population between 1991 and 2001. The Status Indian ASMR for alcohol-related deaths was 20.2 per 10,000 standard population, more than six times the rate of 3.3 for other residents.

FIGURE 50
ASMRs FOR ALCOHOL-RELATED DEATHS BY HEALTH SERVICE DELIVERY AREA
STATUS INDIAN AND OTHER RESIDENTS
BRITISH COLUMBIA, 1991 - 2001

Note: HSDAs with less than three cases are not shown.
 Status Indian rate with 95% confidence interval.

- The 1991-2001 Status Indian ASMRs for alcohol-related deaths ranged from three to almost nine times the rates for other residents in the area. The highest Status Indian ASMR for alcohol-related deaths was 36.4 per 10,000 standard population in HSDA 32 Vancouver.

DRUG-INDUCED DEATHS

Drug-induced deaths are limited to underlying causes of death, such as drug use/abuse, accidental poisoning by drugs, suicide by drugs, and adverse effects of drugs and medications.

- From 1991 to 2001, there were 490 drug-induced deaths in the Status Indian population. The ASMR for drug-induced deaths was 3.7 per 10,000 standard population for Status Indians, more than three times the rate for other residents (1.1).
- HSDA 32 Vancouver had the highest ASMRs for drug-induced deaths (13.5 per 10,000 standard population for Status Indians and 2.0 for other residents).

SMOKING ATTRIBUTABLE MORTALITY (SAM)

Smoking Attributable Mortality (SAM) is an estimate of the impact of smoking on mortality. Calculation of SAM uses a specified proportion of deaths due to selected cancer, circulatory system diseases, and respiratory system diseases among those aged 35 years or older. The methodology assumes that tobacco use in HSDAs is the same as the provincial prevalence.

FIGURE 51
ASMRs FOR DRUG-INDUCED DEATHS BY HEALTH SERVICE DELIVERY AREA
STATUS INDIAN AND OTHER RESIDENTS
BRITISH COLUMBIA, 1991 - 2001

Note: HSDAs with less than three cases are not shown.
 Status Indian rate with 95% confidence interval.

- In the 11 year period, 978 Status Indian deaths were attributed to smoking. The provincial ASMR was 15.7 per 10,000 standard population for Status Indians and 12.5 for other residents.

GLOSSARY

AGE STANDARDIZATION

Age standardized is a method of calculation which adjusts a statistical measure for differences in the age/gender structures between populations. With standardized measures, more meaningful comparisons can be made between genders, different time periods, or geographic areas, because the age standardized statistic is calculated as if all populations had the same age/gender age population distribution.

AGE STANDARDIZED MORTALITY RATE (ASMR)

A summary of age adjusted death rates by age and gender, which have been standardized to a 'standard' population (1991 Canada Census) for the purpose of rate comparisons between genders, different time periods, or different geographic locations. The ASMR is the theoretical number of deaths that would occur per 10,000 population, if the specific population had the same age structure as the standard population.

ALCOHOL-RELATED DEATHS

Alcohol-related deaths are based on the ICD-10 diagnostic categories listed below, for which the resulting deaths are directly attributed to the use or abuse of alcohol. Coding practices from 1995 to 1999 may have produced over-counting of alcohol-related mortality. With the introduction of ICD-10 in 2000, more specific codes are

available. Currently produced data should not be used in combination with data produced prior to 2000.

Alcohol is considered to be a direct cause of death if one of the above conditions is listed as the underlying cause of death on the medical certification of death. If, however, any of the above conditions are listed on the certificate as antecedent causes giving rise to the underlying cause or other significant conditions contributing to the death, the

death is considered to be indirectly related to alcohol. ICD-10 codes for deaths indirectly related to alcohol are listed below:

Indirectly Related to Alcohol (excludes codes for directly related to alcohol)

Cause of Death

ICD-10 Code(s)

Infectious/parasitic diseases
A00-B99

Neoplasms
C00-D48

Endocrine/nutritional/metabolic diseases
E00-E24.3, E24.8-E89

Mental and behavioural disorders
F00-F09, F11-F99

Nervous system diseases
G00-G31.1, G31.8-G62.0,
G62.2-G72.0, G72.2-G99

Circulatory system diseases
I00-I42.5, I42.7-I99

Respiratory system diseases
J00-J99

Digestive system diseases
K00-K29.1, K29.3-K69, K71.0-K85,
K86.1-K92

Genitourinary system diseases
N00-N39, N99.0-N99.1, N99.5

Unintentional injury/accidents
V01-X44, X46-X59, Y40-Y86, Y88

Suicide
X60-X64, X66-X84, Y87.0

Homicide
X85-Y09, Y87.1

Other causes

ASMR

See **Age Standardized Mortality Rate**

BIRTH WEIGHT

The first weight of the fetus or newborn after birth. For live births this weight should be measured within the first hour of life before significant postnatal weight loss has occurred. Hospitals in B.C. measure weight in grams; the approximate equivalents in imperial measures are included below for comparisons to other jurisdictions. For statistical and risk assessment purposes, birth weights are grouped as:

Extremely Low Birth Weight	less than 500 grams (< 1 lb 2 oz)
Very Low Birth Weight	less than 1,500 grams (< 3 lb 5 oz)
Low Birth Weight (LBW)	less than 2,500 grams (< 5 lb 8 oz)
“Normal” Birth Weight	2,500 to 4,499 grams (5 lb 8 oz to 9 lb 15 oz)
High Birth Weight	4,500 grams or more (> 9 lb 15 oz)

CESAREAN SECTION (C-SECTION)

A delivery involving the surgical incision of the abdomen and uterine walls

CONFIDENCE INTERVAL

A range of values that includes the true value of a statistic. In this report, 95% confidence intervals are shown (i.e. the true rate will fall within the specified range 95 times out of 100).

CONGENITAL ANOMALIES

Physical defects that existed or date from birth.

CRUDE RATES

For live births: the number of births divided by the mid-year population and converted to a rate per 1,000 population.

For birth-related statistics (teenage mother, elderly gravida, C-section, low birth weight, and pre-term): the number of these births divided by the number of live births and converted to a rate per 1,000 live births.

For stillbirths: the number of stillbirths divided by the number of total births (live births plus stillbirths) and converted to a rate per 1,000 total births.

For infant deaths: the number of infant deaths divided by the number of live births and converted to a rate per 1,000 live births.

DRUG INDUCED DEATHS

Deaths due to drug induced causes. This category of deaths excludes causes indirectly related to drug use. The causes of death classified as being drug-induced (as shown below) are based on those used by the National Center for Health Statistics¹.

Cause of Death**ICD-10 Code(s)**

Psychoactive substance and drug use/abuse
F11-F16, F19

Accidental poisoning by drugs and medicaments
X40-X44

Suicide by drugs and medicaments
X60-X64

Assault by drugs and medicaments
X85

Poisoning by drugs and medicaments, undetermined if accident or intentional
Y10-Y14

Adverse effects of drugs and medicaments
Y40-Y56, Y57.0-Y57.4, Y57.7-Y57.9, Y88.0

¹ National Center for Health Statistics (1993). Technical notes. Monthly Vital Statistics Report. 41 (Suppl. 7), 48.

EARLY NEONATAL DEATH

Death of a child under seven days of age.

ELDERLY GRAVIDA

Any woman who was 35 years of age or older at the time of delivery of a live born infant.

EXTERNAL CAUSES OF DEATH (ICD-10 CODES V01-Y98)

Deaths due to accidents and violence including environmental events, circumstances and conditions as the cause of injury, poisoning, and other adverse effects. Broad categories include accidents, suicides, medical misadventures or abnormal reactions, homicide, legal intervention, and injury from war operations.

GESTATIONAL AGE

Fetal age or duration of pregnancy measured from the first day of the last normal menstrual period. Gestational age is expressed in completed days or completed weeks (e.g., events occurring 280 to 286 days after the onset of the last normal menstrual period are considered to have occurred at 40 weeks of gestation). Measurements of fetal growth, as they represent continuous variables, are expressed in relation to a specific week of gestational age as follows:

Extremely premature	gestational age of less than 28 weeks
Moderately premature	gestational age of 28 to 36 weeks
Pre-term/Premature	gestational age of less than 37 weeks
Term	gestational age of 37 to 41 weeks
Post-term/Postmature	gestational age of 42 weeks or more

HEALTH SERVICE DELIVERY AREA (HSDA)

A geographic subdivision of the province used by the Health Authorities for administrative purposes.

HIV DISEASE

In 1987, the World Health Organization added new codes to the *International Classification of Diseases* (ICD) to identify Acquired Immunodeficiency Syndrome (AIDS) and Human Immunodeficiency Virus (HIV). In ICD-10, these conditions are coded to B20-B24 and are called HIV disease.

ICD-10 CODES

The World Health Organization's *International Classification of Diseases and Related Health Problems, Tenth Revision*, implemented by the B.C. Vital Statistics Agency on January 1, 2000 for classification of morbidity and mortality.

INFANT DEATH/MORTALITY

Death of children under one year of age.

INFANT MORTALITY RATE

The number of deaths of children under one year of age expressed as a rate per 1,000 live births. The infant mortality rate is an internationally accepted indicator of the health status of a population.

LBW

See **Low Birth Weight**

LIVE BIRTH

The *Vital Statistics Act* defines a live birth as "The complete expulsion or extraction from its mother, irrespective of the duration of the pregnancy, of a product of conception in which, after the expulsion or extraction, there is:

- breathing;
- beating of the heart;
- pulsation of the umbilical cord; or
- unmistakable movement of voluntary muscle, whether or not the umbilical cord has been cut or the placenta attached.

LOW BIRTH WEIGHT (LBW)

A birth weight of less than 2,500 grams. Low birth weight babies have increased risks of morbidity and premature death.

MEDICALLY TREATABLE DISEASES, DEATHS DUE TO

Deaths due to medically treatable diseases are based on Charlton's² classification. The disease categories (shown below) are ones for which mortality could **potentially** have been avoided through appropriate medical intervention. The calculation of this measure is based on deaths of a specified age where the underlying cause stated on the medical certification of death falls into one of these categories.

Cause of Death (Age)**ICD-10 Code(s)**

Hypertensive disease (5-64)

I10-I15

Cervical cancer (5-64)

C53

Pneumonia and unqualified bronchitis (5-49)

J12-J18.1, J18.8-J18.9, J40

Tuberculosis (5-64)

A15-A19, B90

Asthma (5-49)

J45, J46

Chronic rheumatic heart disease (5-44)

I05-I09

Acute respiratory infections and influenza (5-49)

J00-J06, J20-J22, J10-J11

Bacterial infections (5-64)

A00-A05, A20-A49, B95-B96, G00, H66, H70, H95.0-H95.1, I00-I01, I02.0, I02.9, L01-L08, M00, M02.8, M02.9, M46.2, M86, M87.1

Hodgkin's disease (5-34)

C81

Abdominal hernias, cholecystitis and cholelithiasis, appendicitis (5-64)

K40-K46, K80-K81, K35-K37

Deficiency nutritional anemias (5-64)

D50-D53

² Charlton, J.R.H.(1987), Avoidable Deaths and Diseases as Monitors of Health Population. In Abelin,T., Brzezinski,Z.J. & Carstairs, V. (Eds.), Measurement in Health Promotion and Protection (pp 467-

479), Copenhagen, Denmark: World Health Organization, Regional Office for Europe.

MVA DEATHS

Motor Vehicle Accidental Deaths.

NEONATAL DEATH

Death of a child under 28 days of age.

OBSERVED PYLL

The actual number of potential years of life lost (to age 75) from deaths that occurred in the province to residents of a geographic area in a specified time period.

P-VALUE

The p-value is the probability of rejecting the null hypothesis when a specified test procedure is used on a given data set. This probability is the smallest level of significance at which the null hypothesis would be rejected. Once the p-value has been determined, the conclusion at any particular level a results from comparing the p-value to a (e.g., 0.05):

- (a) $p\text{-value} < \text{or} = \alpha \Rightarrow$ reject null hypothesis at level α ,
- b) $p\text{-value} > \alpha \Rightarrow$ do not reject the null hypothesis at level α , and we call the data statistically significant when the null hypothesis is rejected and not significant otherwise.

PERINATAL

Pertaining to or occurring in the period shortly before, during, and after birth.

POPULATION

Mid-year population estimates used in this report were obtained from BC STATS, Ministry of Management Services.

POST NEONATAL DEATH

Death of a child between the ages of 28 days and less than one year.

POTENTIAL YEARS OF LIFE LOST (PYLL)

The number of years of life lost when a person dies before a specified age (75 years). In this report, all deaths are assumed to occur at the midpoint of five-year age groups.

PREMATURE OR PRE-TERM BIRTH

See **Gestational Age**

SAM

See **Smoking Attributable Mortality**

SIDS

Sudden Infant Death Syndrome.

SMOKING ATTRIBUTABLE MORTALITY

The absence on death certifications of complete and reliable data on smoking as a contributing factor requires that estimation or other techniques be used to approximate the extent of smoking attributable deaths. The method used here is based on the concept of attributable risk. The number of adult (35+ years of age) smoking deaths in British Columbia were estimated for the disease categories listed below and weighted by a percentage reflecting the proportion of these deaths attributed to smoking:

Cause of Death**ICD-10 Code(s)****Malignant Neoplasms**

Malignant neoplasm of lip, oral cavity, and pharynx

C00-C14

Malignant neoplasm of esophagus

C15

Malignant neoplasm of pancreas

C25

Malignant neoplasm of larynx

C32

Malignant neoplasm of trachea, lung, and bronchus

C33-C34

Malignant neoplasm of cervix, uterus

C53-C55

Malignant neoplasm of urinary bladder

C67

Malignant neoplasm of kidney and other unspecified urinary organs

C64-C66, C68

Circulatory System Diseases

Hypertension

I10-I13

Ischemic heart disease

I20-I25

J10-J18.1, J18.8-J18.9

Bronchitis, emphysema

J40-J43

Chronic obstructive pulmonary disease

J44

Other respiratory diseases

A15-A19, J45-J46

The American Society's Cancer Prevention Study (CPS-II) 1982–1988³ established the age groups and the classification of smokers (current, former, and never) for which smoking prevalence data were required. B.C. prevalence rates for smoking were provided in the *Tobacco Use in B.C. (1997)* survey commissioned by the B.C. and Yukon Health and Stroke Foundation⁴.

- ³ Centers for Disease Control (1990). *Smoking and health: A national status report*. (DHSS publication no. (CDC) 87–8396). 2nd Edition. Rockville, MD: U.S. Department of Health and Human Services.
- ⁴ Tobacco Use in B.C., ANGUS REID GROUP survey results, September 1997.

STANDARD POPULATION

A reference population of known age distribution used in the calculation of standardized indicators to adjust for variations in population age structures in different geographic areas or time periods. The 1991 Canadian Census is used as the standard population in the calculation of ASMR.

STILLBIRTH

The *Vital Statistics Act* defines a stillbirth as “The complete expulsion or extraction from its mother after at least 20 weeks of pregnancy, or after attaining a weight of at least 500 grams, of a product of conception in which, after the expulsion or extraction, there is no breathing, beating of the heart, pulsation of the umbilical cord, or unmistakable movement of voluntary muscle.”

STILLBIRTH RATE

See **Crude Rates**

TEENAGE MOTHERS

Mothers less than 20 years of age at the time of delivery.

TOTAL BIRTHS

The number of live births plus stillbirths.

TOTAL PYLL

The total number of potential years of life lost prior to an established cut-off point of 75 years.

UCOD

See **Underlying Cause of Death**.

UNDERLYING CAUSE OF DEATH (UCOD)

The World Health Organization defines the underlying cause of death as “(a) the disease of injury which initiated the train of events leading directly to death, or (b) the circumstances of the accident or violence which produced the fatal injury”.

APPENDIX 3**BIRTH AND DEATH-RELATED STATISTICAL SUMMARIES BY HEALTH SERVICE DELIVERY AREA**

The tables that follow provide birth and death-related statistics for Status Indians and Other Residents in each Health Service Delivery Area for the years 1991 - 2001. This information is provided for each year individually, as well as for the nine year aggregate.

The categories presented are listed below.

BIRTH-RELATED AND INFANT MORTALITY

Indicator	Definition
Low Birth Weight	<2,500 grams
Premature	<37 weeks gestation
Teenage Mother	<20 years old
Elderly Gravida	35 years or older
Stillbirth	see glossary
Early Neonatal Death	Age at death <7 days
Neonatal Death	Age at death <28 days
Post Neonatal Death	Age at death 28-364 days
Infant Death	Age at death <1 year

DEATH-RELATED

Cause of Death	ICD-10 Code
Infectious/Parasitic Diseases	A00-B99
Cancer	C00-C97
Lung	C33-C34
Female Breast	C50.0-C50.9
Endocrine/Nutritional/Metabolic Diseases	E00-E89
Circulatory System Diseases	I00-I99
Ischemic Heart	I20-I25
Cerebrovascular	I60-I69
Respiratory System Diseases	J00-J99
Pneumonia/Influenza	J10-J18.1, J18.8-J18.9
Chronic Lung Disease	J40-J44
Digestive System Diseases	K00-K93
External Causes	V01-Y98
Motor Vehicle Accidents	V02-V04, V09, V12-V14, V19.0-V19.6, V20-V79, V80.3-V80.5, V82.0-V82.1, V82.3-V89.0, V89.2, V89.9, Y85.0.
Suicide	X60-X84, Y87.0
Alcohol-Related Deaths	See glossary
Medical Treatable Diseases	See glossary
Drug-Induced Deaths	See glossary
Smoking Attributable Mortality (SAM)	See glossary

Notes: ¹ Live Birth Rates are per 1,000 population. ² Rates for birth statistics and infant deaths per 1,000 live births. ³ Stillbirth rates per 1,000 total births (live births plus stillbirths).

ASMR per 10,000 Standard population (Canada Census 1991).

S/O - Status/Other is the ratio of the Status Indian 1991-2001 rate to the rate for Other Residents in the area shown.

SAM - Smoking attributable deaths may not sum to Total due to rounding.

Notes: ¹ Live Birth Rates are per 1,000 population. ² Rates for birth statistics and infant deaths per 1,000 live births. ³ Stillbirth rates per 1,000 total births (live births plus stillbirths).

ASMR per 10,000 Standard population (Canada Census 1991).

S/O - Status/Other is the ratio of the Status Indian 1991-2001 rate to the rate for Other Residents in the area shown.

SAM - Smoking attributable deaths may not sum to Total due to rounding.

Notes: ¹ Live Birth Rates are per 1,000 population. ² Rates for birth statistics and infant deaths per 1,000 live births. ³ Stillbirth rates per 1,000 total births (live births plus stillbirths).

ASMR per 10,000 Standard population (Canada Census 1991).

S/O - Status/Other is the ratio of the Status Indian 1991-2001 rate to the rate for Other Residents in the area shown.

SAM - Smoking attributable deaths may not sum to Total due to rounding.

Notes: ¹ Live Birth Rates are per 1,000 population. ² Rates for birth statistics and infant deaths per 1,000 live births. ³ Stillbirth rates per 1,000 total births (live births plus stillbirths).

ASMR per 10,000 Standard population (Canada Census 1991).

S/O - Status/Other is the ratio of the Status Indian 1991-2001 rate to the rate for Other Residents in the area shown.

SAM - Smoking attributable deaths may not sum to Total due to rounding.

Notes: ¹ Live Birth Rates are per 1,000 population. ² Rates for birth statistics and infant deaths per 1,000 live births. ³ Stillbirth rates per 1,000 total births (live births plus stillbirths).
 ASMR per 10,000 Standard population (Canada Census 1991).
 S/O - Status/Other is the ratio of the Status Indian 1991-2001 rate to the rate for Other Residents in the area shown.
 SAM - Smoking attributable deaths may not sum to Total due to rounding.

APPENDIX 4**AGE STANDARDIZED MORTALITY RATES BY HEALTH SERVICE DELIVERY AREA**

The categories presented in Appendix 4 are listed below.

CAUSES OF DEATH	ICD-10 CODES	CAUSES OF DEATH	ICD-10 CODES
Infectious/Parasitic Diseases	A00-B99	Digestive System Diseases	K00-K93
HIV Disease	B20-B24	Chronic Liver Disease/Cirrhosis	K70, K73-K74, K76.0-K76.1 Congenital
Tuberculosis	A15-A19, B90	Anomalies	Q00-Q99
Cancer	C00-C97	Perinatal Conditions	P00-P96
Lung	C33-C34	External Causes	V01-Y98
Female Breast	C50.0-C50.9	Motor Vehicle Accidents	V02-V04, V09, V12-V14, V19.0-V19.6, V20-V79, V80.3-V80.5, V82.0-V82.1, V82.3-V89.0, V89.2, V89.9, Y85.0.
Colorectal	C18-C21	Accidental Poisoning	X40-X49
Cervical	C53	Accidental Falls	W00-W19
Prostate	C61	Suicide	X60-X84, Y87.0
Endocrine/Nutritional/Metabolic	E00-E89	Homicide	X85-Y09, Y87.1
Diabetes	E10-E14	Fire and Flames	X00-X09
Circulatory System Diseases	I00-I99	Alcohol-Related Deaths	see glossary
Ischemic Heart	I20-I25	Medical Treatable Diseases	see glossary
Cerebrovascular	I60-I69	Drug Induced Deaths	see glossary
Arteries	I70-I78, I26-I28	Smoking Attributable Mortality (SAM)	see glossary
Respiratory System Diseases	J00-J99		
Pneumonia/Influenza	J10-J18.1, J18.8-J18.9		
Chronic Lung Disease	J40-J44		
Asthma	J45-J46

APPENDIX 5**POTENTIAL YEARS OF LIFE LOST (AGE UNDER 75 YEARS) BY HEALTH SERVICE DELIVERY AREA**

The categories presented in Appendix 5 are listed below.

CAUSES OF DEATH	ICD-10 CODES	CAUSES OF DEATH	ICD-10 CODES
Infectious/Parasitic Diseases	A00-B99	Digestive System Diseases	K00-K93
HIV Disease	B20-B24	Chronic Liver Disease/Cirrhosis	K70, K73-K74, K76.0-K76.1
Tuberculosis	A15-A19, B90	Congenital Anomalies	Q00-Q99
Cancer	C00-C97	Perinatal Conditions	P00-P96
Lung	C33-C34	External Causes	V01-Y98
Female Breast	C50.0-C50.9	Motor Vehicle Accidents	V02-V04, V09, V12-14, V19.0-V19.6, V20-V79, V80.3-V80.5, V82.0-2.1, V82.3-V89.0, V89.2, V89.9, Y85.0.
Colorectal	C18-C21	Accidental Poisoning	X40-X49
Cervical	C53	Accidental Falls	W00-W19
Prostate	C61	Suicide	X60-X84, Y87.0
Endocrine/Nutritional/Metabolic	E00-E89	Homicide	X85-Y09, Y87.1
Diabetes	E10-E14	Fire and Flames	X00-X09
Circulatory System Diseases	I00-I99	Alcohol-Related Deaths	see glossary
Ischemic Heart	I20-I25	Medical Treatable Diseases	see glossary
Cerebrovascular	I60-I69	Drug Induced Deaths	see glossary
Arteries	I70-I78, I26-I28	Smoking Attributable Mortality (SAM)	see glossary
Respiratory System Diseases	J00-J99		
Pneumonia/Influenza	J10-J18.1, J18.8-J18.9		
Chronic Lung Disease	J40-J44		
Asthma	J45-J46

Notes: PYLL - Potential Years of Life Lost per 1,000 population (based on Canada Census 1991 as standard population).
Health Service Delivery Areas will not sum to B.C. due to cases with unknown addresses.
Smoking attributable deaths may not sum to Total due to rounding.

APPENDIX 6

CAUSES OF DEATH BY HEALTH SERVICE DELIVERY AREA, GENDER, AND AGE GROUP

CAUSES OF DEATH BY HEALTH SERVICE DELIVERY AREA, GENDER, AND AGE GROUP

APPENDIX 7**ASMR TRENDS FOR SELECTED CAUSES OF DEATH**

The categories presented in Appendix 7 are listed below.

CAUSES OF DEATH	ICD-10 CODES	CAUSES OF DEATH	ICD-10 CODES
Infectious/Parasitic Diseases	A00-B99	Digestive System Diseases	K00-K93
HIV Disease	B20-B24	Chronic Liver Disease/Cirrhosis	K70, K73-K74, K76.0-K76.1
Tuberculosis	A15-A19, B90	Congenital Anomalies	Q00-Q99
Cancer	C00-C97	Perinatal Conditions	P00-P96
Lung	C33-C34	External Causes	V01-Y98
Female Breast	C50.0-C50.9	Motor Vehicle Accidents	V02-V04, V09, V12-14, V19.0-V19.6, V20-V79, V80.3-V80.5, V82.0-2.1, V82.3-V89.0, V89.2, V89.9, Y85.0.
Colorectal	C18-C21	Accidental Poisoning	X40-X49
Cervical	C53	Accidental Falls	W00-W19
Prostate	C61	Suicide	X60-X84, Y87.0
Endocrine/Nutritional/Metabolic	E00-E89	Homicide	X85-Y09, Y87.1
Diabetes	E10-E14	Fire and Flames	X00-X09
Circulatory System Diseases	I00-I99	Alcohol-Related Deaths	see glossary
Ischemic Heart	I20-I25	Medical Treatable Diseases	see glossary
Cerebrovascular	I60-I69	Drug Induced Deaths	see glossary
Arteries	I70-I78, I26-I28	Smoking Attributable Mortality (SAM)	see glossary
Respiratory System Diseases	J00-J99		
Pneumonia/Influenza	J10-J18.1, J18.8-J18.9		
Chronic Lung Disease	J40-J44		
Asthma	J45-J46

Notes: ASMR - Age Standardized Mortality Rate per 10,000 Standard population (Canada Census 1991).

* In 1993 the medical certification of death was revised to include a question about environmental, occupational, and lifestyle factors that may have contributed to the death. As a result, the number of deaths indirectly due to alcohol has increased since 1993.

Notes: ASMR - Age Standardized Mortality Rate per 10,000 Standard population (Canada Census 1991).

* In 1993 the medical certification of death was revised to include a question about environmental, occupational, and lifestyle factors that may have contributed to the death. As a result, the number of deaths indirectly due to alcohol has increased since 1993.
